This needs much closer scrutiny. I am asking that the USACE require BNSF to conduct a full Environmental Impact Statement that includes a Health Risk Assessment of all the air pollutants that will be generated at the site. The project should not proceed until a detailed plan for multi-point air quality monitoring and pre-determined & enforceable mitigation steps is developed and the public has a chance to review it.

Thanks for your consideration of this request.

Sincerely

Herta M. Folsm
