To: Marx, Joshua A NWK;
Subject: BNSF Intermodal Facility water contamination
Date: Sunday, August 09, 2009 12:01:26 PM

Mr. Marx:

Because the water runoff from the proposed WILL affect the drinking water of more than 30,000 local residents, we need answers and information to consider BEFORE approving the permit to proceed.

1. How thoroughly will the water runoff from this facility be monitored? What recourse will the residents have if this facility contaminates our drinking water?

2. Will water runoff from the Intermodal Facility increase flooding potential for areas between the facility and Hillsdale Lake?

3. If creeks and streams are filled in to build the facility, what will the impact to natural habitat be? Can the natural habitat be rebuilt?

4. How and to what extent will the operation of the porposed facility affect the adjacent Big Bull Creek Park? How will the water runoff from this facility be routed through the park?

Please... preferrably we need more detailed information such as an Environmental Impact Statement, and time to study/comment before granting approval to proceed with this gigantic project.

Thanks for listening,

Marshall Wolfe
