

US Army Corps
of Engineers
Kansas City District

Sec 216 Feasibility Study of the Existing Kansas Citys, Missouri & Kansas Local Flood Protection Project

*Public Information/Scoping Meeting
North Kansas City Community Center
August 20, 2003*

agenda...

US Army Corps
of Engineers
Kansas City District

Agenda

- Study team introductions
- Presentation
 - General information, authorization
 - Sponsors' discuss/describe levee units
 - Feasibility activities and analysis
 - NEPA process
- Comment collection & discussion (Audience)
- Adjourn -- target 8:00

US Army Corps
of Engineers
Kansas City District

Public Comments

- Proceedings are being recorded and all comments become part of the public record
- Please hold comment forms until close of presentation:
 - Will be collected
 - Initial summary of comments to be posted on project website in late Sep.

US Army Corps
of Engineers
Kansas City District

Meeting Objectives

- Obtain public input and accomplish coordination early in the study process
- Provide information regarding study status

US Army Corps
of Engineers
Kansas City District

Kansas Citys Levees Team Introductions

Corps & Local Sponsors

US Army Corps
of Engineers
Kansas City District

Project Website

Current information on the project is available on our web page and will be updated during the study.

www.nwk.usace.army.mil/projects/7levees

The slides shown in this meeting will be posted on the above website within the next week.

US Army Corps
of Engineers
Kansas City District

Agency and Public Meetings

- Introductory Feasibility Meeting: June 6, 2001
- Agency Info/Scoping Meeting – Aug 7, 2003
- Public Info/Scoping Meeting – Aug 20, 2003
- Draft Evaluation Report/Draft Environmental Impact Statement Public Meeting – Early 2005

US Army Corps
of Engineers
Kansas City District

Flood Damage Reduction

General Information

- Congress has provided the Corps of Engineers numerous authorities and mandates over the past 65 years regarding flood damage reduction
- The current Administration is supportive (budgets) of flood damage reduction initiatives
- Sponsors are local partners in Corps projects, and participate in the funding and execution of projects (or studies) per specific program guidance. In the case of the Kansas Citys levees, the sponsors own, maintain, and operate the entire seven levee system.

US Army Corps
of Engineers
Kansas City District

Congressional Authority

Section 216 of the 1970 Flood Control Act provides authority to reexamine completed civil works.

US Army Corps
of Engineers
Kansas City District

Section 216 Authorization

The Secretary of the Army, acting through the Chief of Engineers, is authorized to review the operation of projects, the construction of which has been completed and which were constructed by the Corps of Engineers in the interest of navigation, flood control, water supply, and related purposes, when found advisable due to the significantly changed physical or economic conditions, and to report thereon to Congress with recommendations on the advisability of modifying structures or their operation, and for improving the quality of the environment in the overall public interest.

US Army Corps
of Engineers
Kansas City District

Typical Phases of a Corps Project

- Reconnaissance (completed)
- **Feasibility (Underway)...** Is a detailed planning study that produces a Feasibility Report and associated NEPA documentation which are normally sent to Congress for review and potential project authorization
- Preconstruction Engineering and Design
- Construction
- Project Operation & Maintenance

US Army Corps
of Engineers
Kansas City District

Planning Objectives for this Feasibility Study

- **Update & verify data on the reliability of the existing flood protection system**
- **Develop alternative plans (to include a review of “No Federal Action”) for increasing reliability of the overall existing system and provide a final recommended plan for implementation that is technically, economically, and environmentally sound.**

US Army Corps
of Engineers
Kansas City District

Levee Reliability

For the purposes of this study, levee (and associated protective works) reliability will be defined as:

A measure of how well a levee system will perform under various flood conditions

US Army Corps
of Engineers
Kansas City District

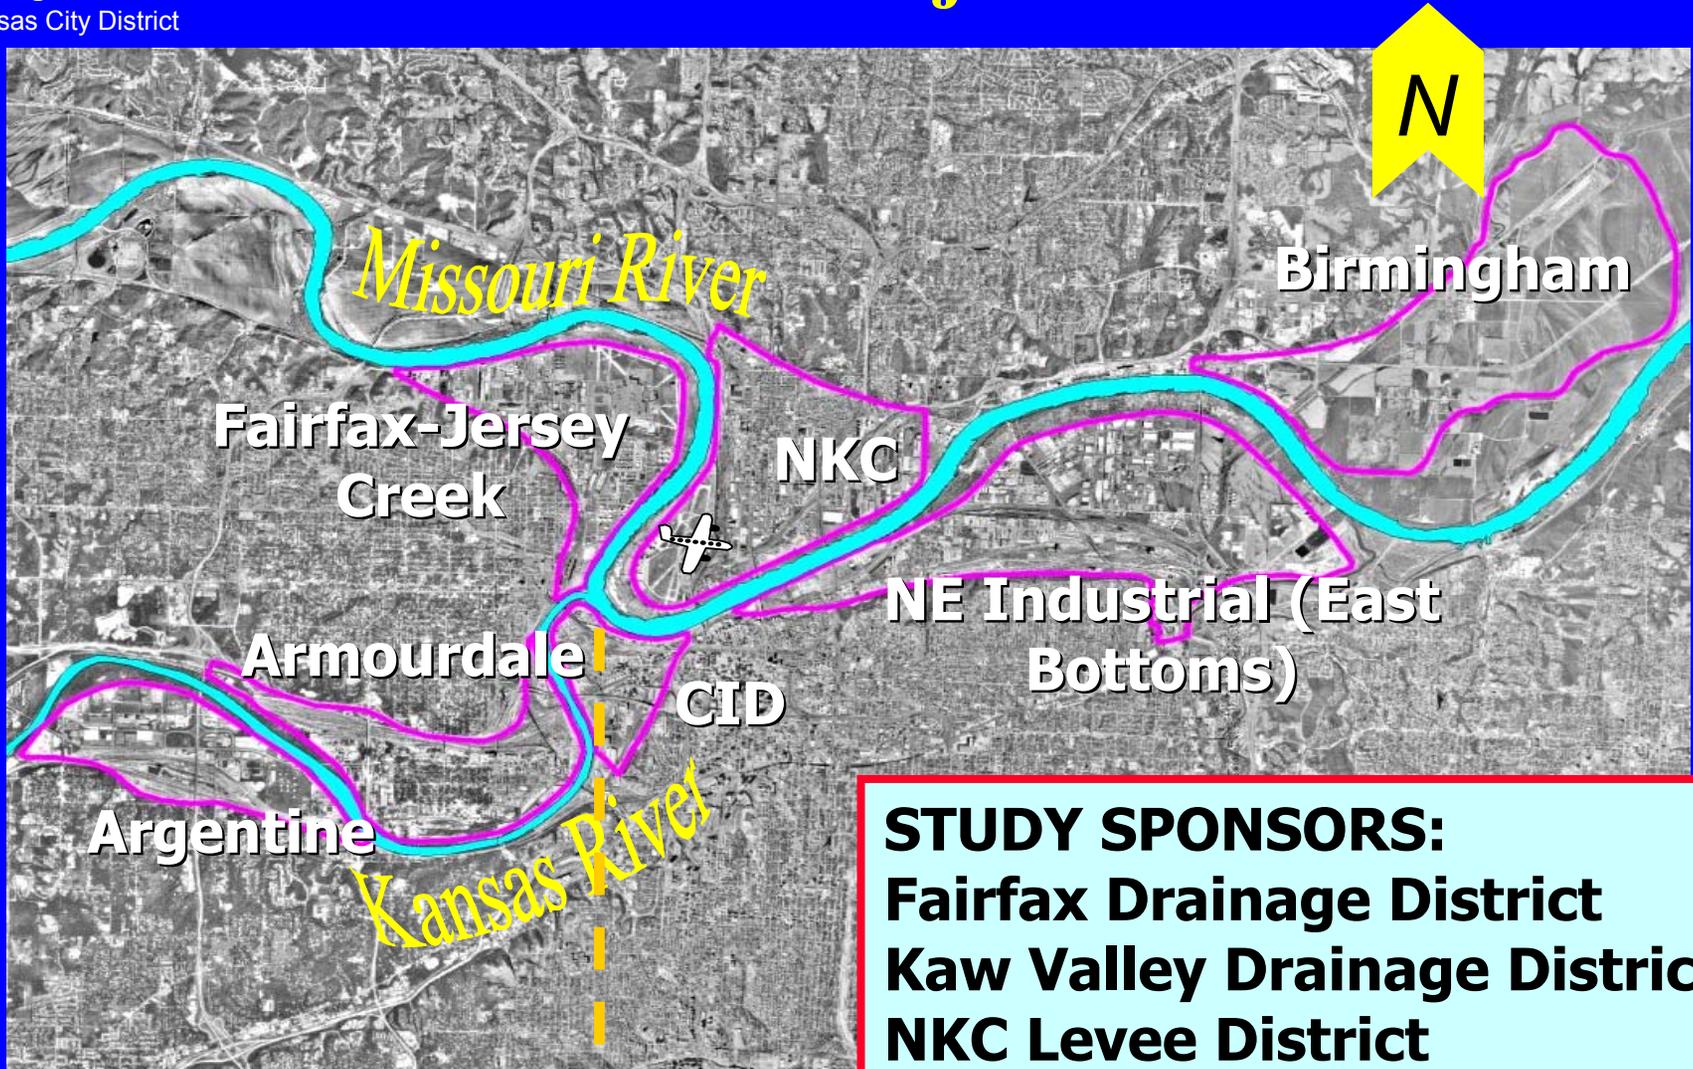

Discussion of the Existing Kansas Citys Local Flood Protection Project

- Seven levee units overview
- KC metropolitan (KS and MO) protected areas
- Individual sponsors presentations

US Army Corps
of Engineers
Kansas City District

Kansas Citys Local Flood Protection Project Overview

STUDY SPONSORS:
Fairfax Drainage District
Kaw Valley Drainage District
NKC Levee District
KCMO Levee Committee

US Army Corps
of Engineers
Kansas City District

Overall Project Description

- **Extends along 9.5 miles of Kansas River and 16 miles of Missouri River.**
- **Protects 32 square miles of mostly urban commercial and industrial areas with estimated investment of over \$ 12 Billion.**
- **Recent Federal involvement began with the 1936/1944 authorized project**

US Army Corps
of Engineers
Kansas City District

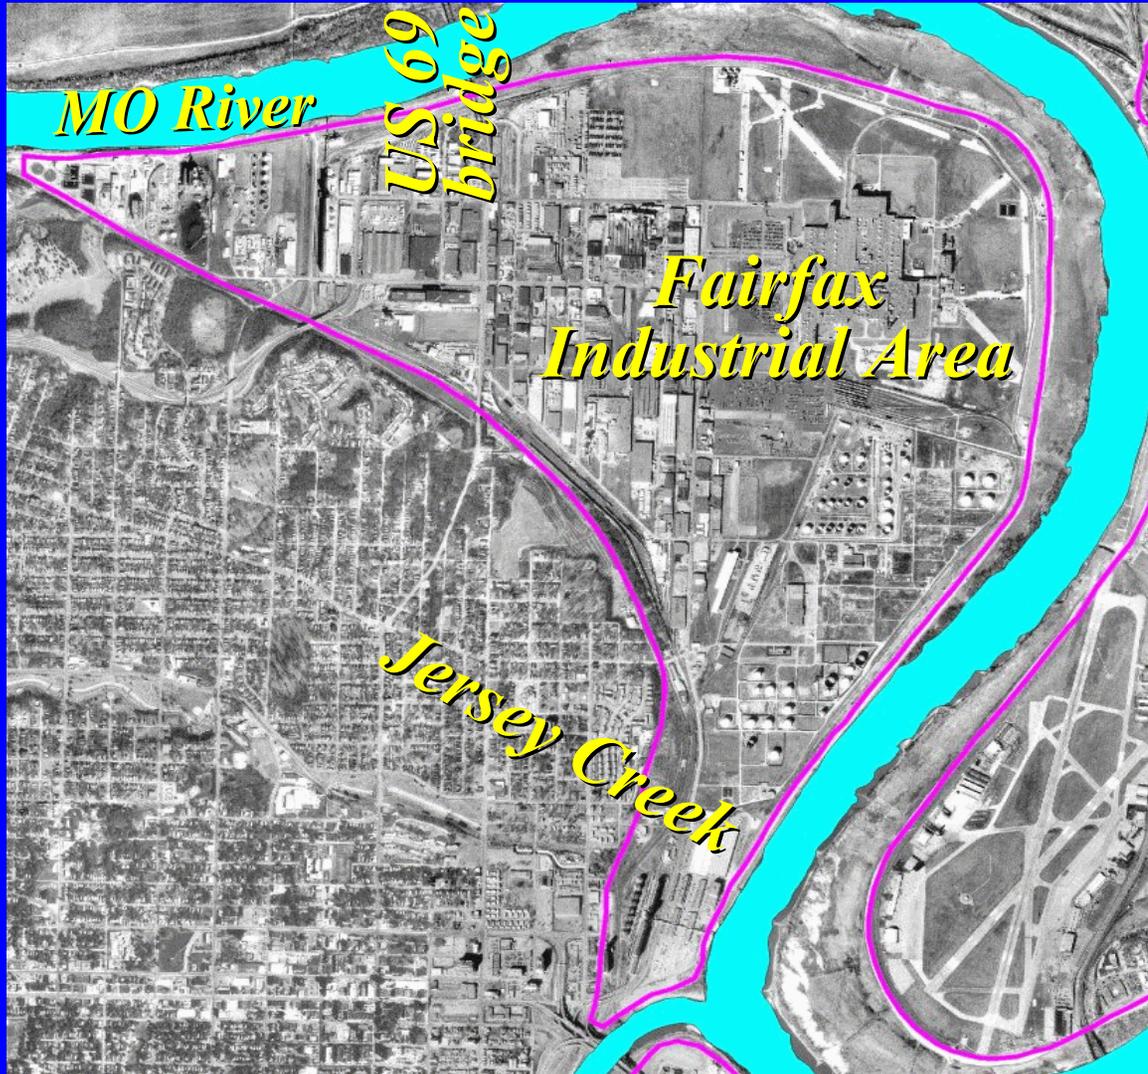

Sponsor Presentations

- **Fairfax Drainage District**
- Kaw Valley Drainage District
- KCMO Levee Committee
- North Kansas City Levee District
- Birmingham

US Army Corps
of Engineers
Kansas City District

Fairfax / Jersey Creek Unit

US Army Corps
of Engineers
Kansas City District

Fairfax/Jersey Creek Unit

- The Fairfax Drainage District operates & maintains the Fairfax (main) portion of this unit.
- The Kaw Valley Drainage District operates and maintains the lower Jersey Creek area.
- Federal involvement:
 - Federal/local project completed in 1941
 - Modifications and improvements constructed in late 1940s and 1950s

US Army Corps
of Engineers
Kansas City District

Fairfax Drainage District

- A Board of Three Directors is Elected by Property Owners
- Full-time Engineer, four operator maintenance employees, and office staff
- Primary funding is property tax, and other funding sources from local agreements
- Pump station operation, flood fighting, system improvements, maintenance, etc.

US Army Corps
of Engineers
Kansas City District

Sponsor Presentations Continued

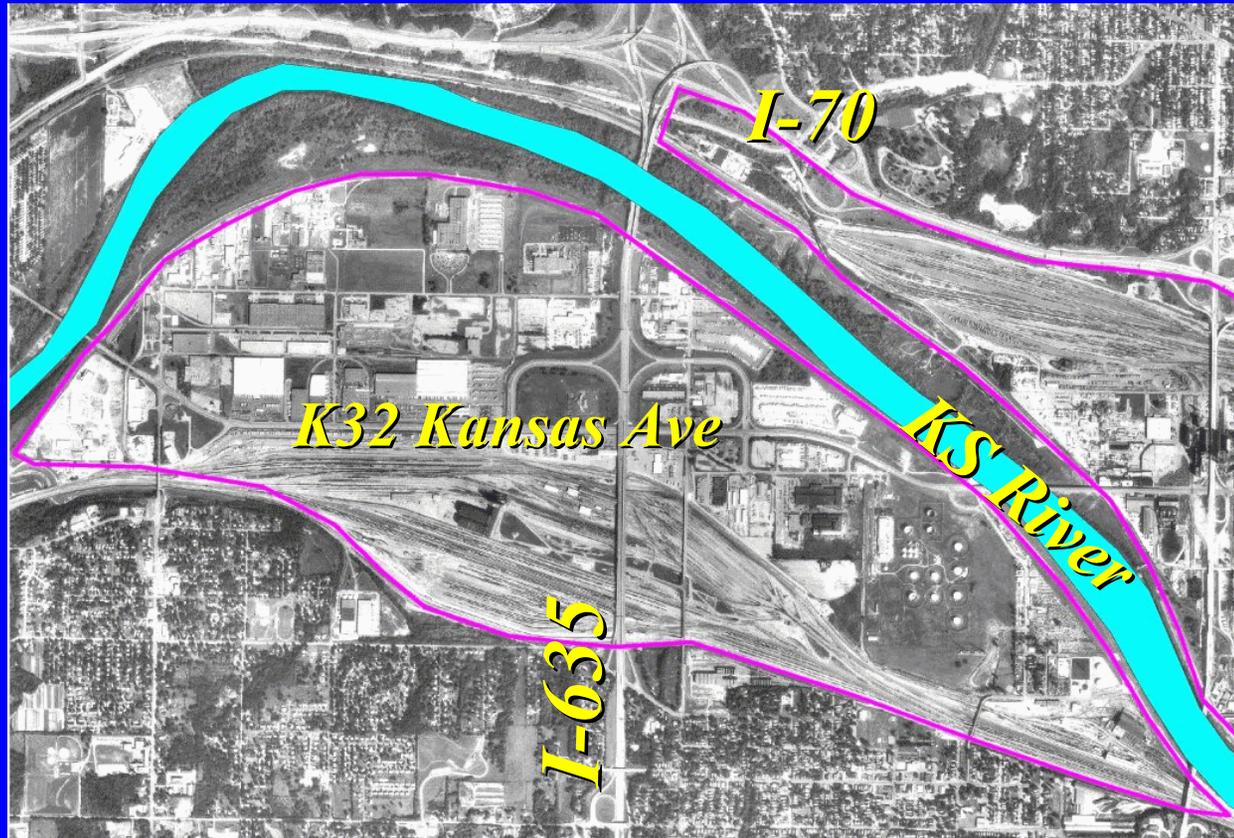

- Fairfax Drainage District
- **Kaw Valley Drainage District**
- KCMO Levee Committee
- North Kansas City Levee District
- Birmingham

US Army Corps
of Engineers
Kansas City District

Argentine Unit

- **KVDD built some protective works early in 1900's.**
- **Recent Federal involvement**
 - **Main project built 1951 through 1955.**
 - **Improvements completed in 1978.**

US Army Corps
of Engineers
Kansas City District

Armourdale Unit

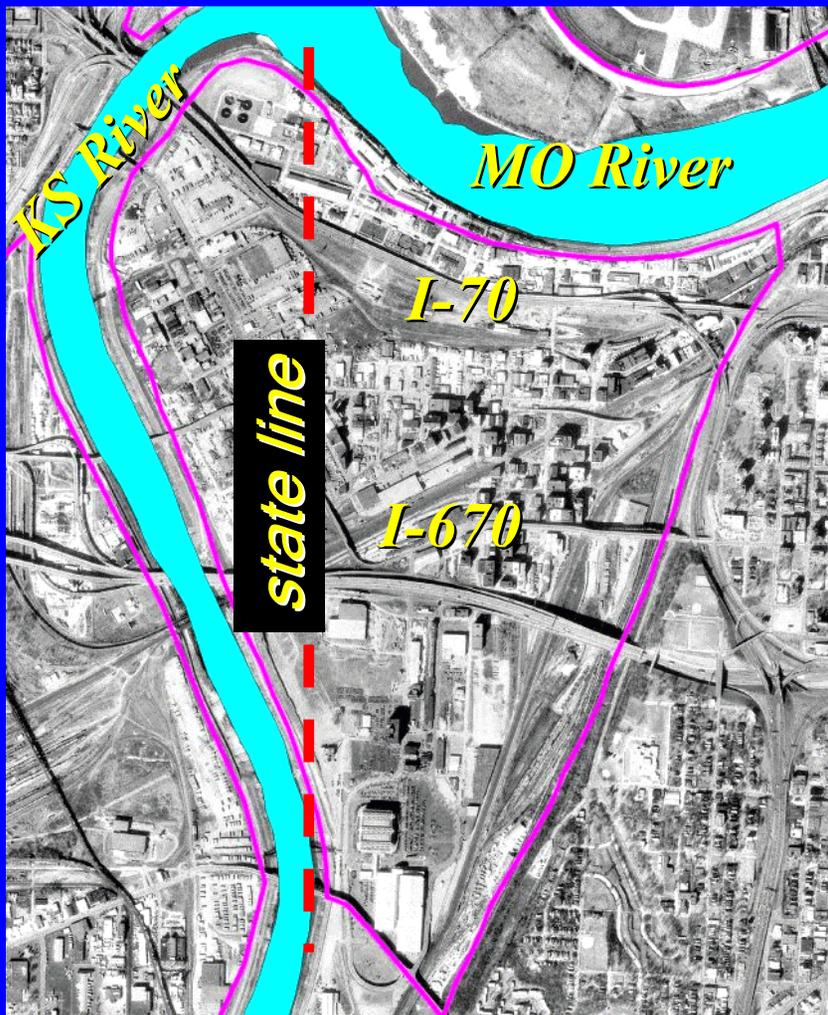

- **KVDD built some protective works early in 1900's.**
- **Recent Federal involvement**
 - **Main project built 1949 through 1951.**
 - **Improvements completed in 1976.**

US Army Corps
of Engineers
Kansas City District

Central Industrial District Unit

- Some protective works built early 1900s
- KVDD : Kansas portion
- KCMO : Missouri portion
- Recent Federal involvement
 - Main project built 1940s through 1955
 - Improvements completed in 1979

US Army Corps
of Engineers
Kansas City District

Sponsor Presentations Continued

- Fairfax Drainage District
- Kaw Valley Drainage District
- KCMO Levee Committee
- North Kansas City Levee District
- Birmingham

US Army Corps
of Engineers
Kansas City District

City of Kansas City Missouri Levee Units

- City of Kansas City, MO owns:
 - CID – MO
 - NE Industrial District (East Bottoms)
 - North Kansas City – Downtown Airport (only)
- KCMO Levee Committee administers all daily operation and maintenance (O&M).

US Army Corps
of Engineers
Kansas City District

KCMO Levee Committee Organization

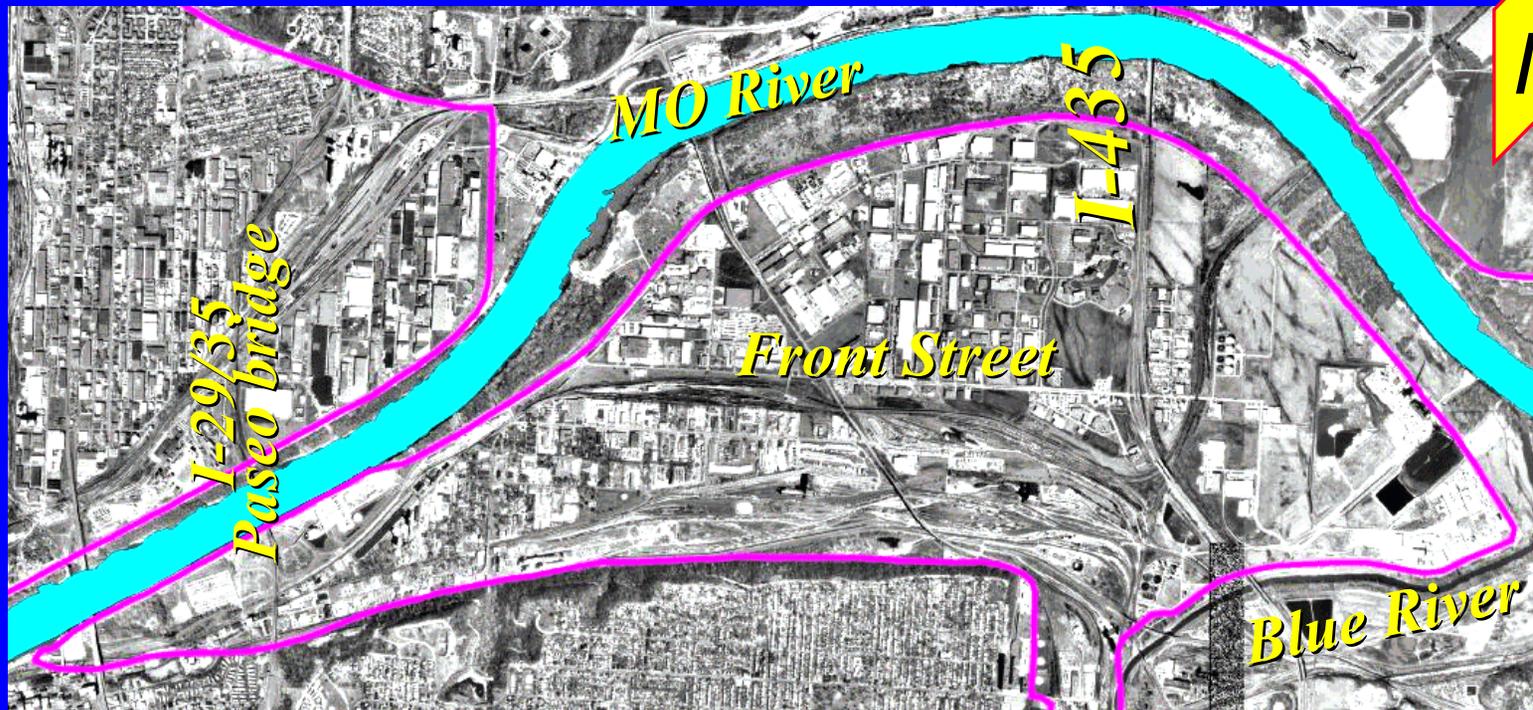

- KCMO Levee Committee is composed of staff from the various City Departments with responsibility for Levee O&M including:
 - Water Services
 - Aviation
 - Parks & Recreation.
- Daily operational tasks performed by KCMO Water Services Department – Stormwater Utility Division.

US Army Corps
of Engineers
Kansas City District

Northeast Industrial District (East Bottoms) Unit

- Began with Federal & local KCMO cooperation
- Construction completed in 1950
- Improvements completed in 1974

US Army Corps
of Engineers
Kansas City District

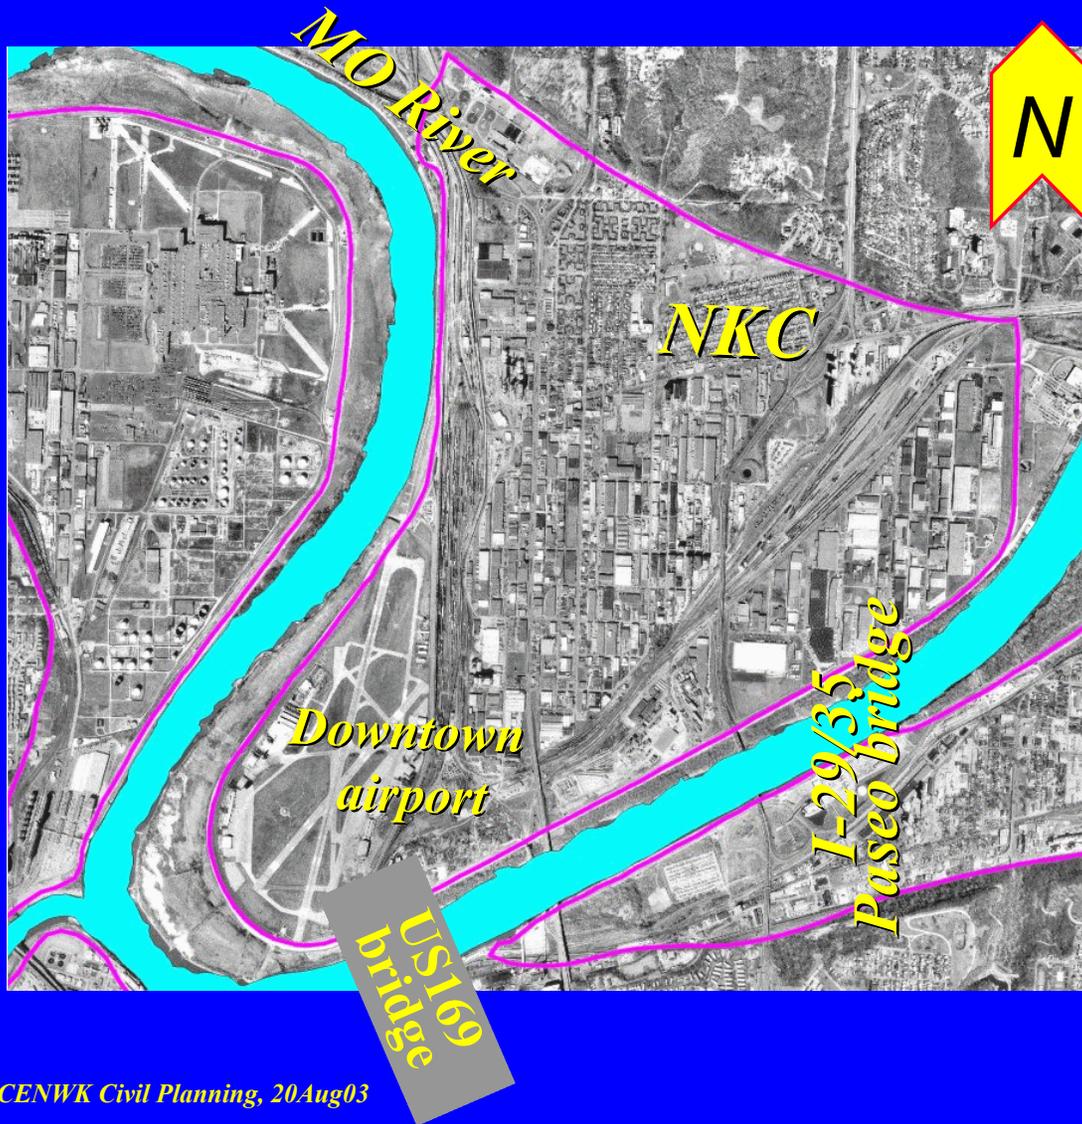

Sponsor Presentations Continued

- Fairfax Drainage District
- Kaw Valley Drainage District
- KCMO Levee Committee
- **North Kansas City Levee District**
- Birmingham

US Army Corps
of Engineers
Kansas City District

North Kansas City Unit

- The North Kansas City Levee District was organized in 1909
- In 1941, the NKC Levee District entered into agreement with the Corps of Engineers and became a local sponsor
- This led to Federal improvements in the 1940's
- More improvements were made after 1951

US Army Corps
of Engineers
Kansas City District

NKC Levee District Responsibilities

- The North Kansas City Levee District Owns and Maintains the Protective Works
- Technical Guidance & Oversight is Provided by the Corps of Engineers
- The NKCC Levee District Levies a Tax on Properties in the Protected Area

US Army Corps
of Engineers
Kansas City District

NKC Levee District Officials

Property Owners elect a Board of Supervisors

- Richard Lanning, District President
- William Zimmer
- Clay Edwards
- Ed A. Brown
- Michael K. O'Neill

US Army Corps
of Engineers
Kansas City District

NKC Levee District Local Cooperation

- The NKCC Levee District is a separate entity from the City of North Kansas City.
- The City leases the District's pumping plants.
- The City provides support during flood fight operations.

US Army Corps
of Engineers
Kansas City District

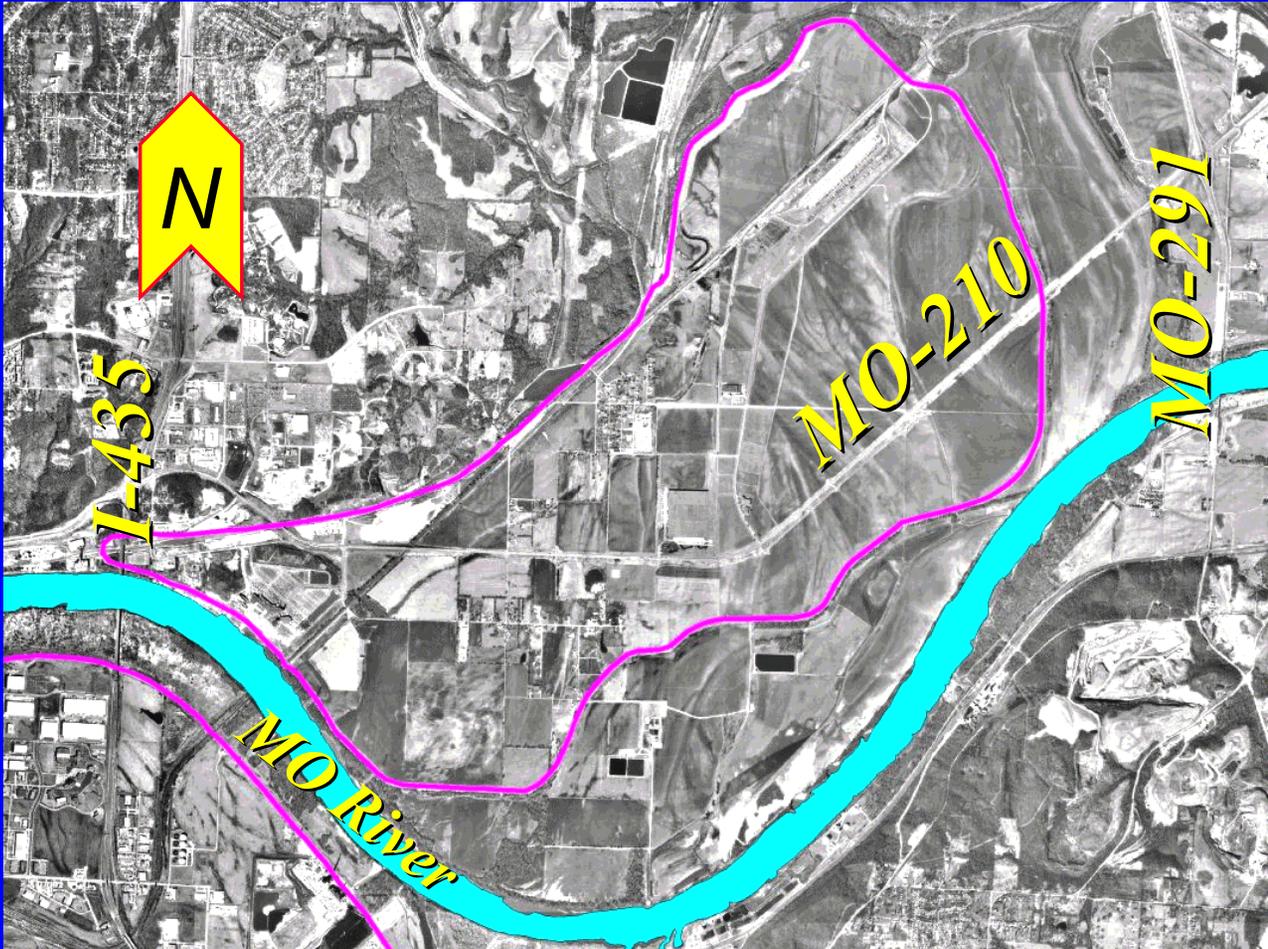

Sponsor Presentations Continued

- Fairfax Drainage District
- Kaw Valley Drainage District
- KCMO Levee Committee
- North Kansas City Levee District
- **Birmingham**

US Army Corps
of Engineers
Kansas City District

Birmingham Unit

US Army Corps
of Engineers
Kansas City District

Birmingham Levee Unit

- Birmingham Levee District built some protective works in early 1900's
 - Recent Federal involvement
 - Upstream section raised and strengthened in 1952
 - Downstream section modified and strengthened from 1954-1955

US Army Corps
of Engineers
Kansas City District

Major Feasibility Activities

- Examine existing conditions: hydrologic, geotechnical, structural, economic, and environmental
- Hold agency and public meetings
- Identify potential management measures & feature modifications to address problems (areas of interest)
- Refine baseline information & existing conditions
- Formulate, evaluate and make recommendations on alternative plans -- NED, environmental and sponsor criteria all play a role
- Prepare concurrent draft feasibility report & draft Environmental Impact Statement in early 2005
- Issue final report mid to late 2005

US Army Corps
of Engineers
Kansas City District

Some Questions We Will Consider During The Study

- System is roughly 40 to 60 years old. Is everything still working as it is supposed to be working?
- Are we still achieving the original design objectives?
- What environmental opportunities exist?
- Is the public aware of problems we need to look at?
- Are sponsors aware of problems we need to look at?
- What did the 1993 event (*will discuss this further later in presentation*) tell us about the system?
- Is it possible to economically increase the benefits of the system?

US Army Corps
of Engineers
Kansas City District

Why 1993 is Important...

Armourdale

Fairfax

CID

NKC

Missouri River

1993 Flood Stage Photo

US Army Corps
of Engineers
Kansas City District

Implications of 1993

- **Overall the seven levee system withstood the Flood of 1993, but some elements were seriously challenged as the flood crest reached near overtopping levels.**
- **This experience raised concerns that the levees may provide less than the level of protection for which they were designed.**

US Army Corps
of Engineers
Kansas City District

Post 1993 Actions

- **Kansas City, KS, and Kansas City, MO, wrote to KC District Corps of Engineers expressing concerns about the system**
- **In response, Corps completed a reconnaissance report in Aug 1999.**
 - **It found a reasonable likelihood of a Federal interest in a potential project to improve system reliability**
 - **And led to the current Feasibility study**

US Army Corps
of Engineers
Kansas City District

Initial Technical / Economic Analysis for Each Levee Unit

1. Hydrologic Reliability
2. Geotechnical Reliability
3. Structural Reliability
4. Economic Investment and
Estimated Flood Damages

Breach of the Fairfax-Jersey Creek Unit

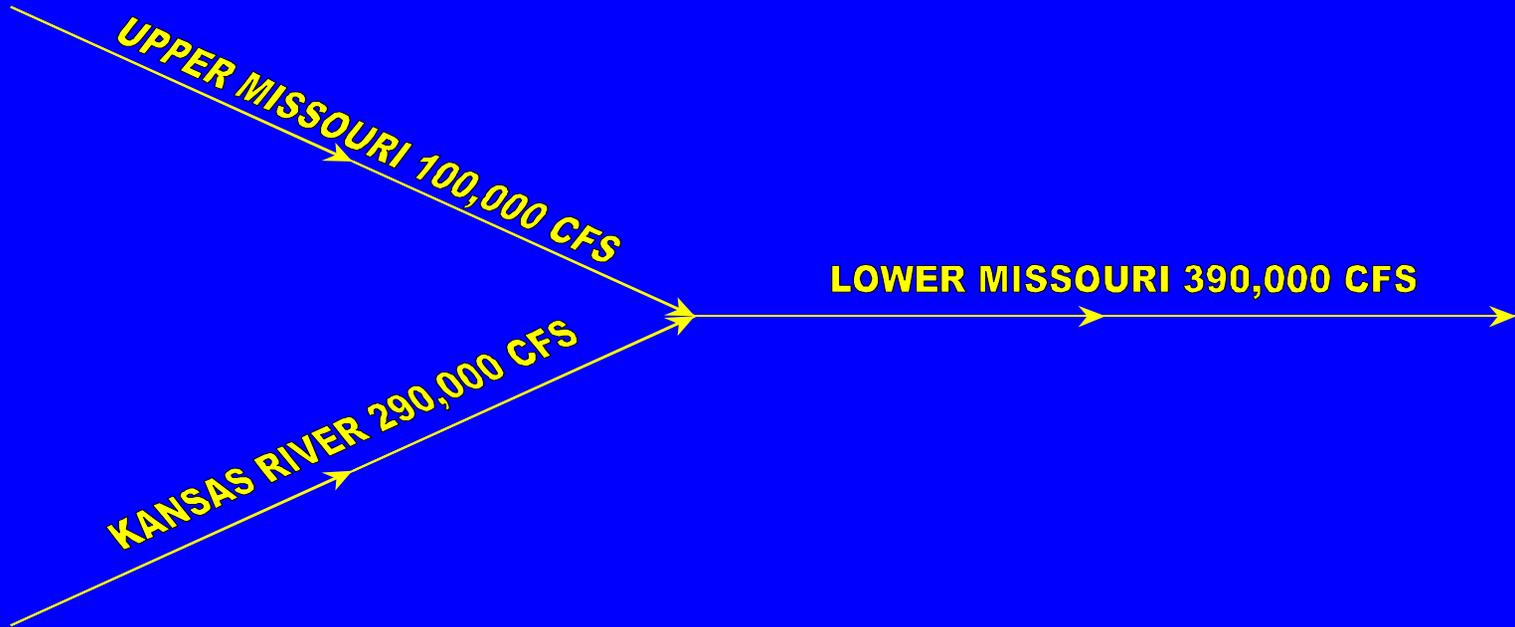

*Estimated discharges just
prior to overtopping...*

US Army Corps
of Engineers
Kansas City District

1951 Flood Event

(Estimated Flows Just Before Initial Overtopping)

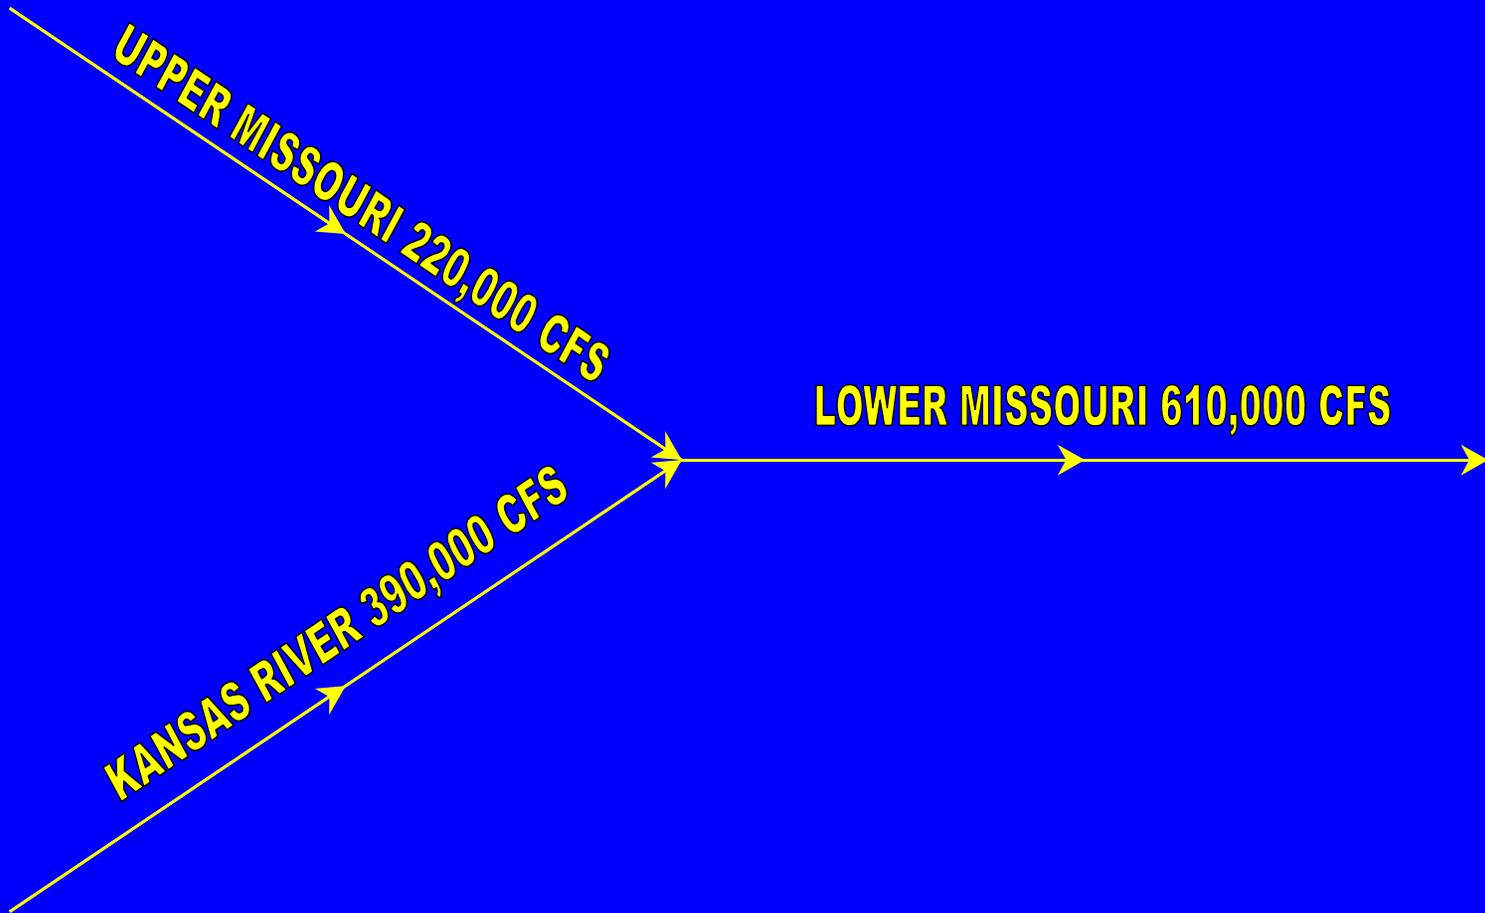

*Kansas River flow eventually peaked
at 510,000 cfs*

US Army Corps
of Engineers
Kansas City District

1962 Modified Design Flows (Kansas River Levee Raises of 1970's)

US Army Corps
of Engineers
Kansas City District

- Now let's look at 1993...

US Army Corps
of Engineers
Kansas City District

Characterization of the 1993 Flood Event

- The 1993 event was primarily a Missouri River event
- Downstream from the MO & KS confluence, the 1993 event was essentially the design flood event for NKC, CID-MO, East Bottoms and Birmingham Units
- Upstream from the Kansas River, the MO River flood flows of 376,000 cfs did not reach the original 1940 upper Missouri design discharge flows of 460,000 cfs
- On the Kansas River, the peak flow at the mouth was about 165,000 cfs, well below the 1962 modified design discharge of 390,000 cfs

Corrections made to this slide 27Aug03

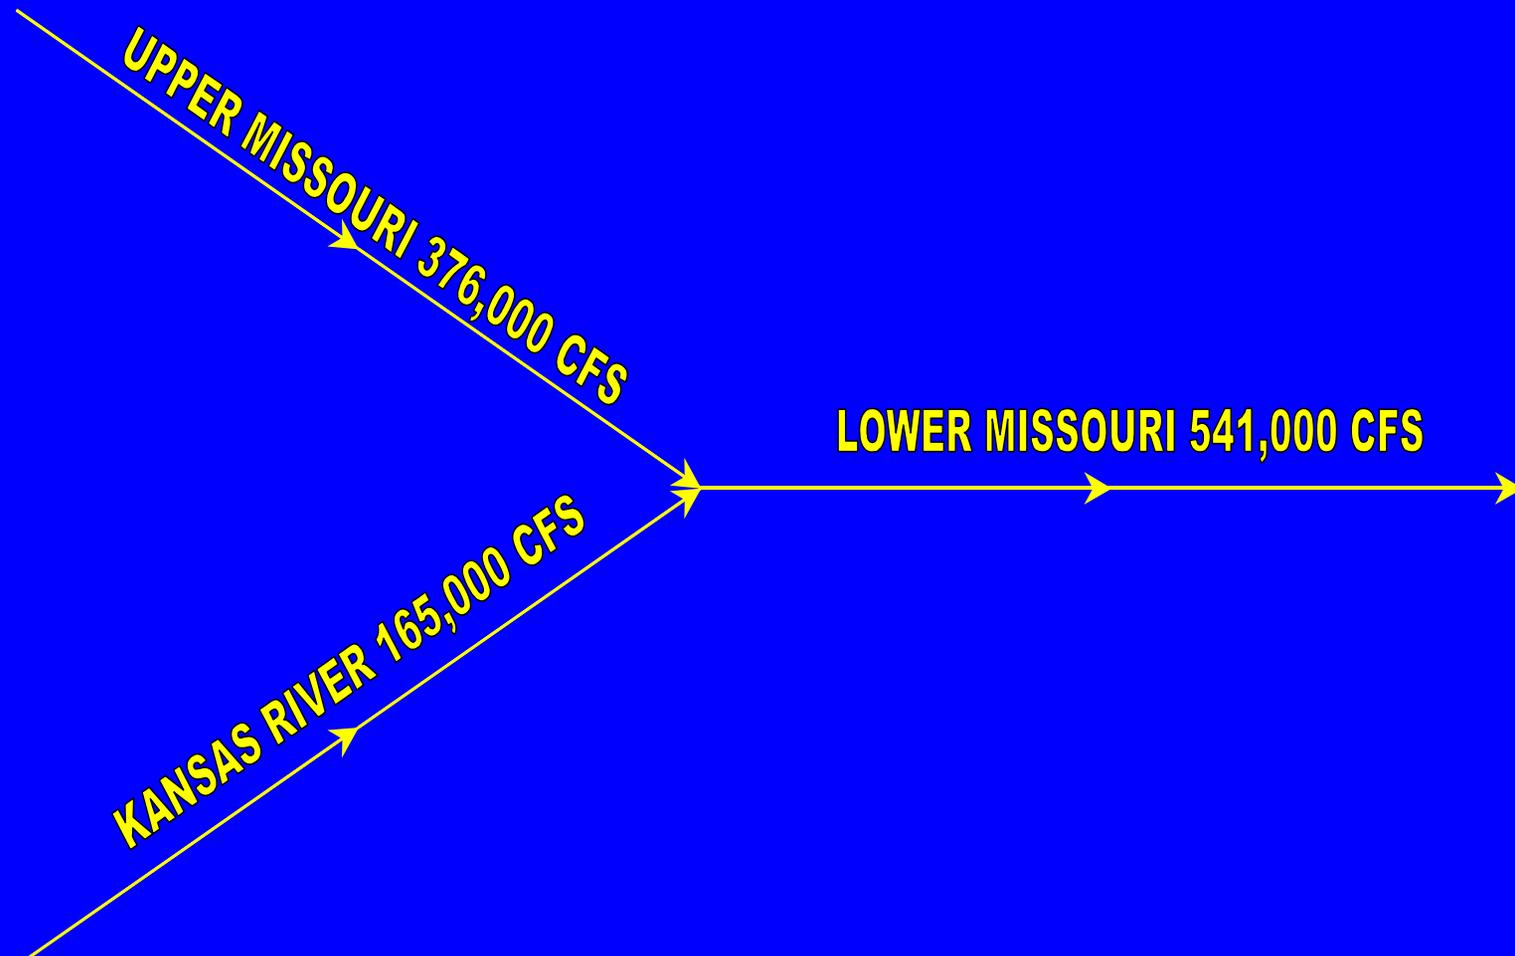

CENWK Civil Planning, 20Aug03

1993 Flood Event

(Flow Scenario – as occurred)

US Army Corps
of Engineers
Kansas City District

- What have we learned after looking at these various flood events...

US Army Corps
of Engineers
Kansas City District

Hydrologic & Hydraulic Analysis: Early Indications

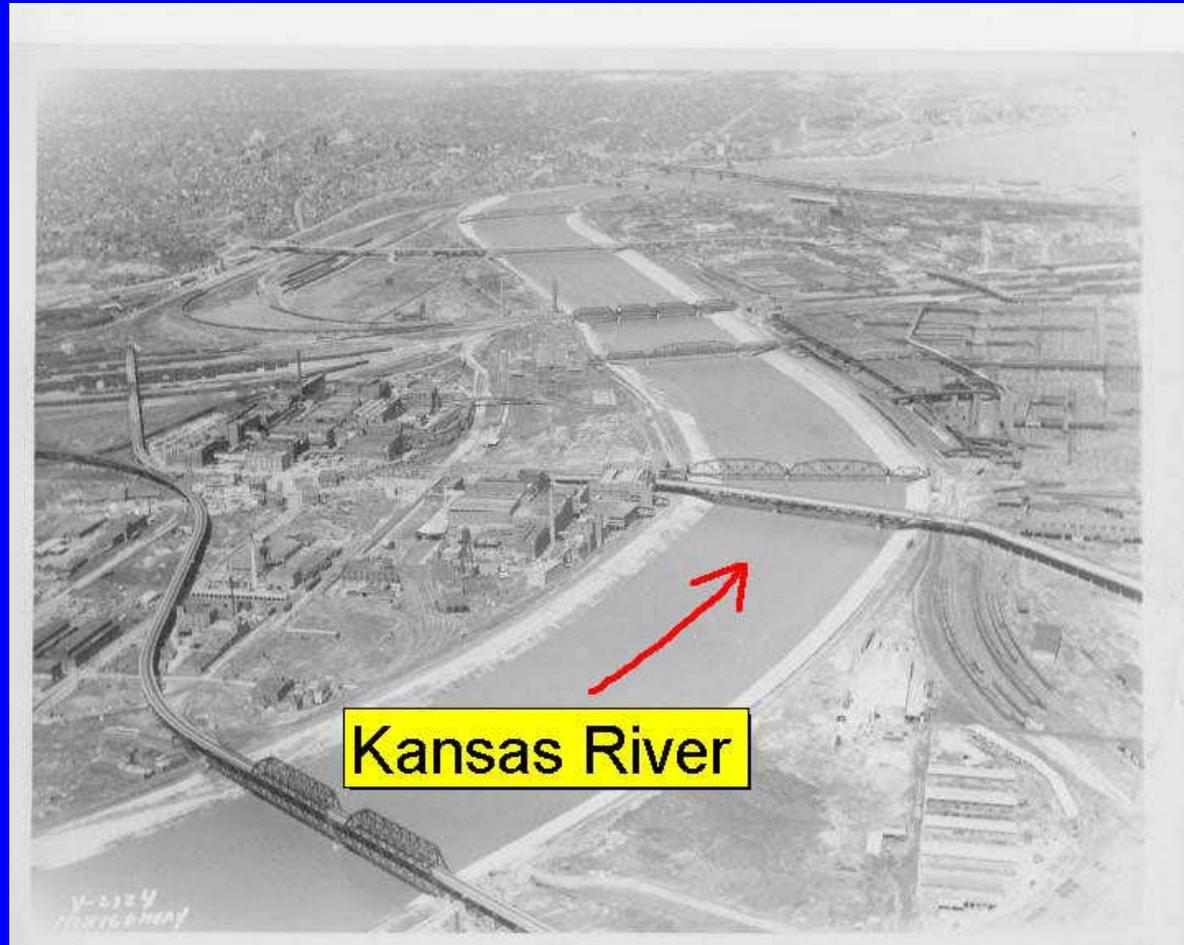

- The current ability of the Kansas River channel (within the study area) to carry the 1962 design discharges is questionable
- This requires further exploration of possible measures to:
 - Potentially increase carrying capacity of the channel
 - Potentially raise levee height on Kansas River Units
 - Other ?/ combination of measures

US Army Corps
of Engineers
Kansas City District

Kansas River, 1955

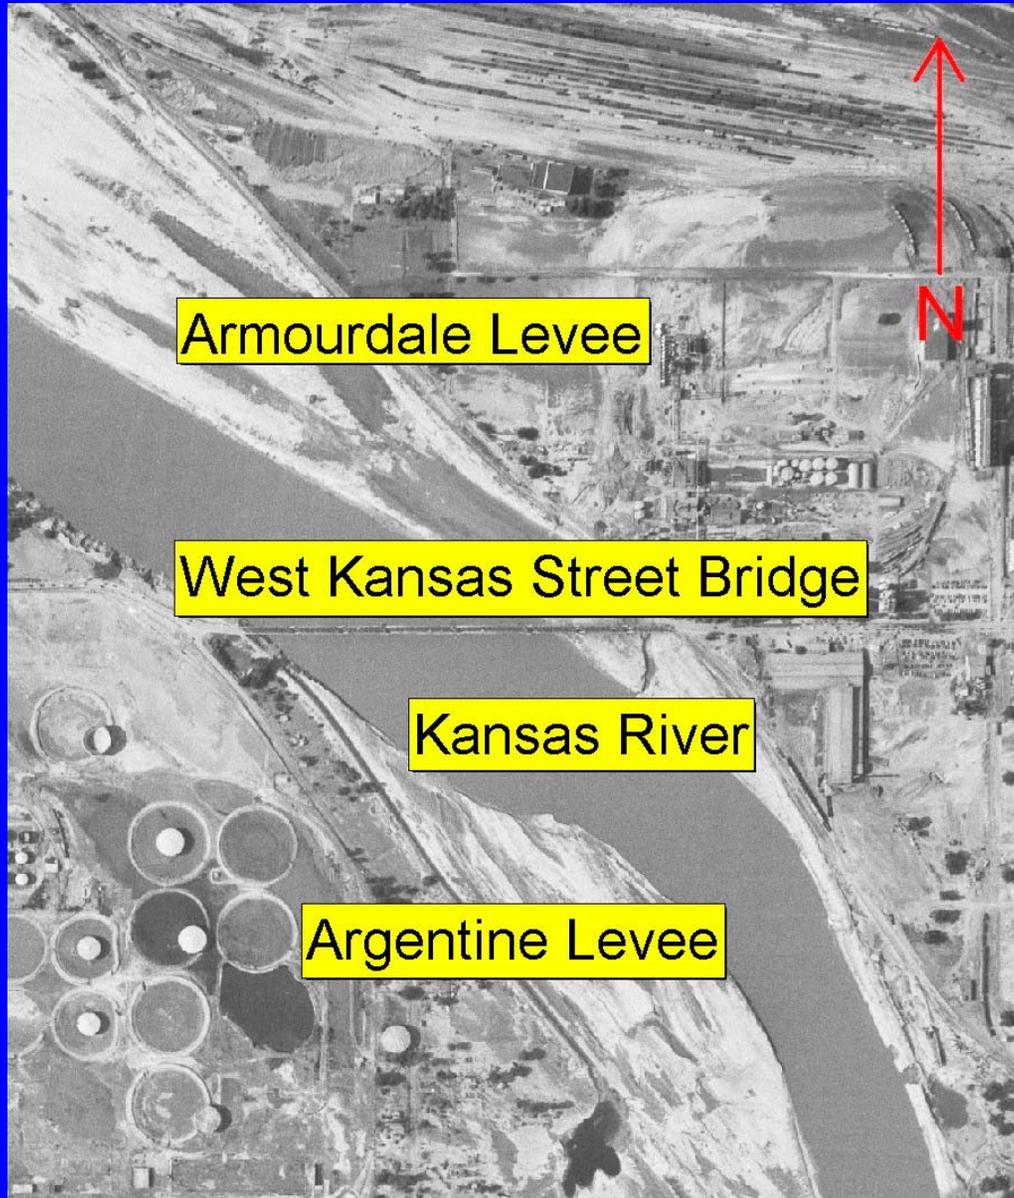

Kansas River 1962 modified design flows were based on a relatively “clean” flood conveyance zone, i.e. not much flow obstruction

US Army Corps
of Engineers
Kansas City District

Kansas River Post-1951 Flood

US Army Corps
of Engineers
Kansas City District

Kansas River, 1999

US Army Corps
of Engineers
Kansas City District

Summary: Preliminary Analysis of Overtopping Protection

- From a hydraulic overtopping standpoint, all of the 7 levees passed the 1993 event
- Preliminary analysis has identified the three Kansas river units as candidates for increased overtopping protection
- Other (minor) areas of the system may undergo some type of localized raise dependent on site conditions

US Army Corps
of Engineers
Kansas City District

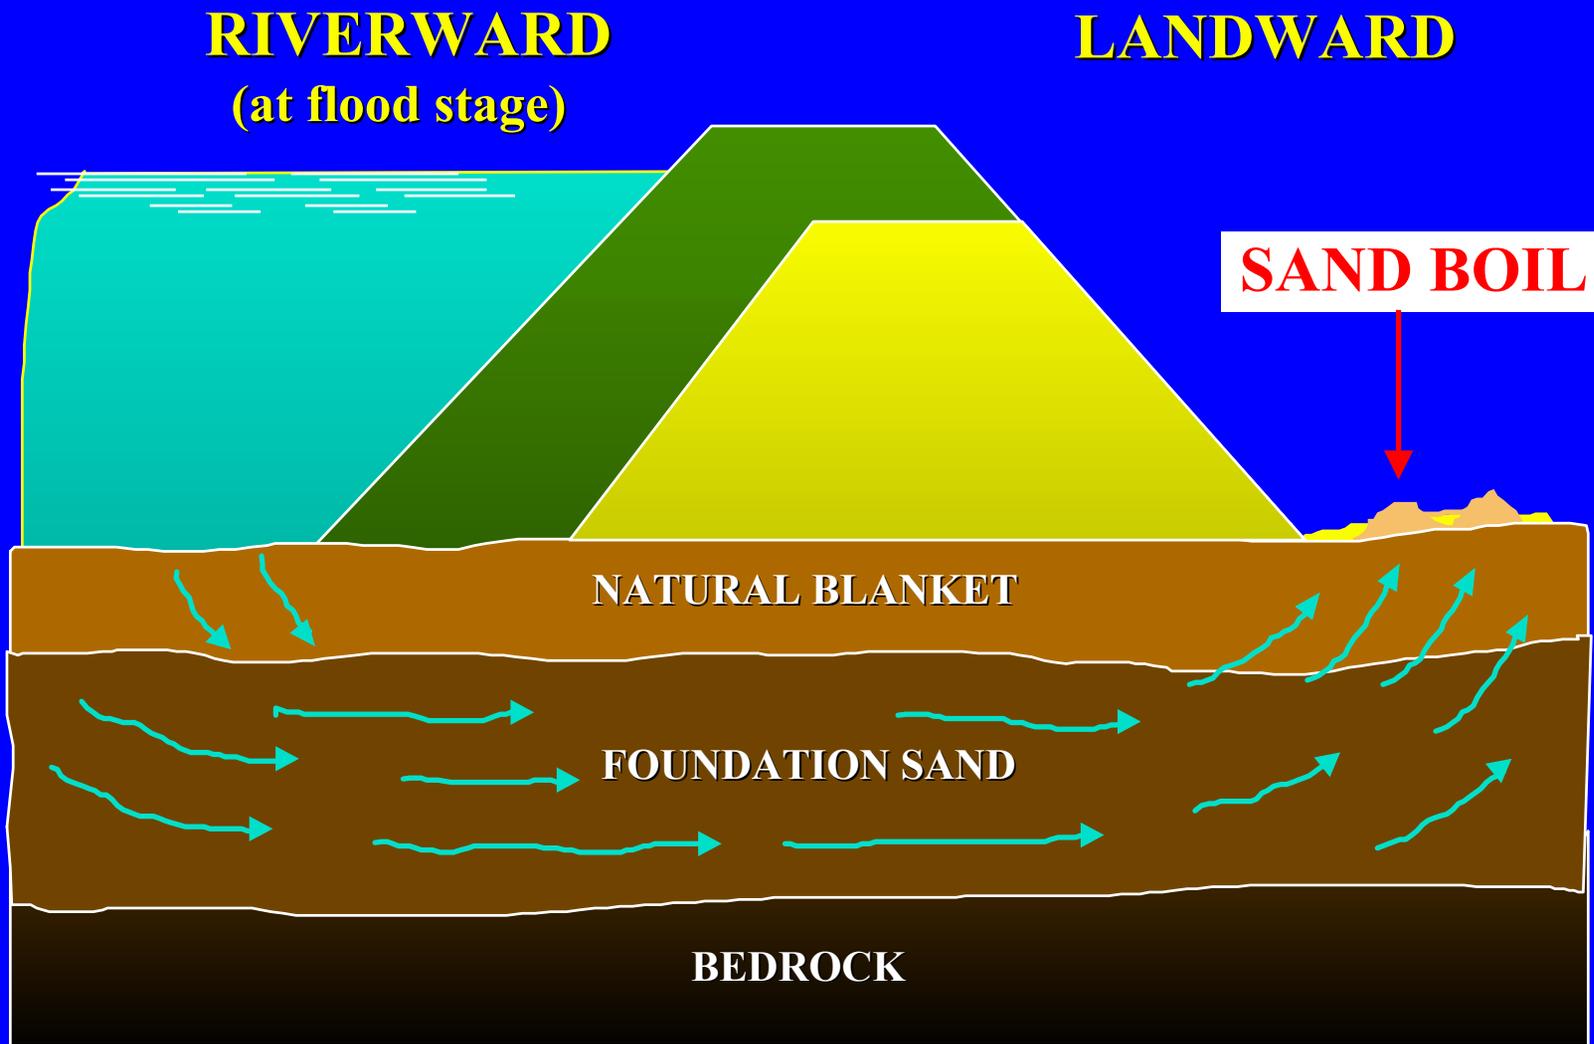

Initial Technical / Economic Analysis for Each Levee Unit

1. Hydrologic Reliability
2. **Geotechnical Reliability**
3. Structural Reliability
4. Economic Investment and

3. **Structural Reliability**
4. Economic Investment and
Estimated Flood Damages

US Army Corps
of Engineers
Kansas City District

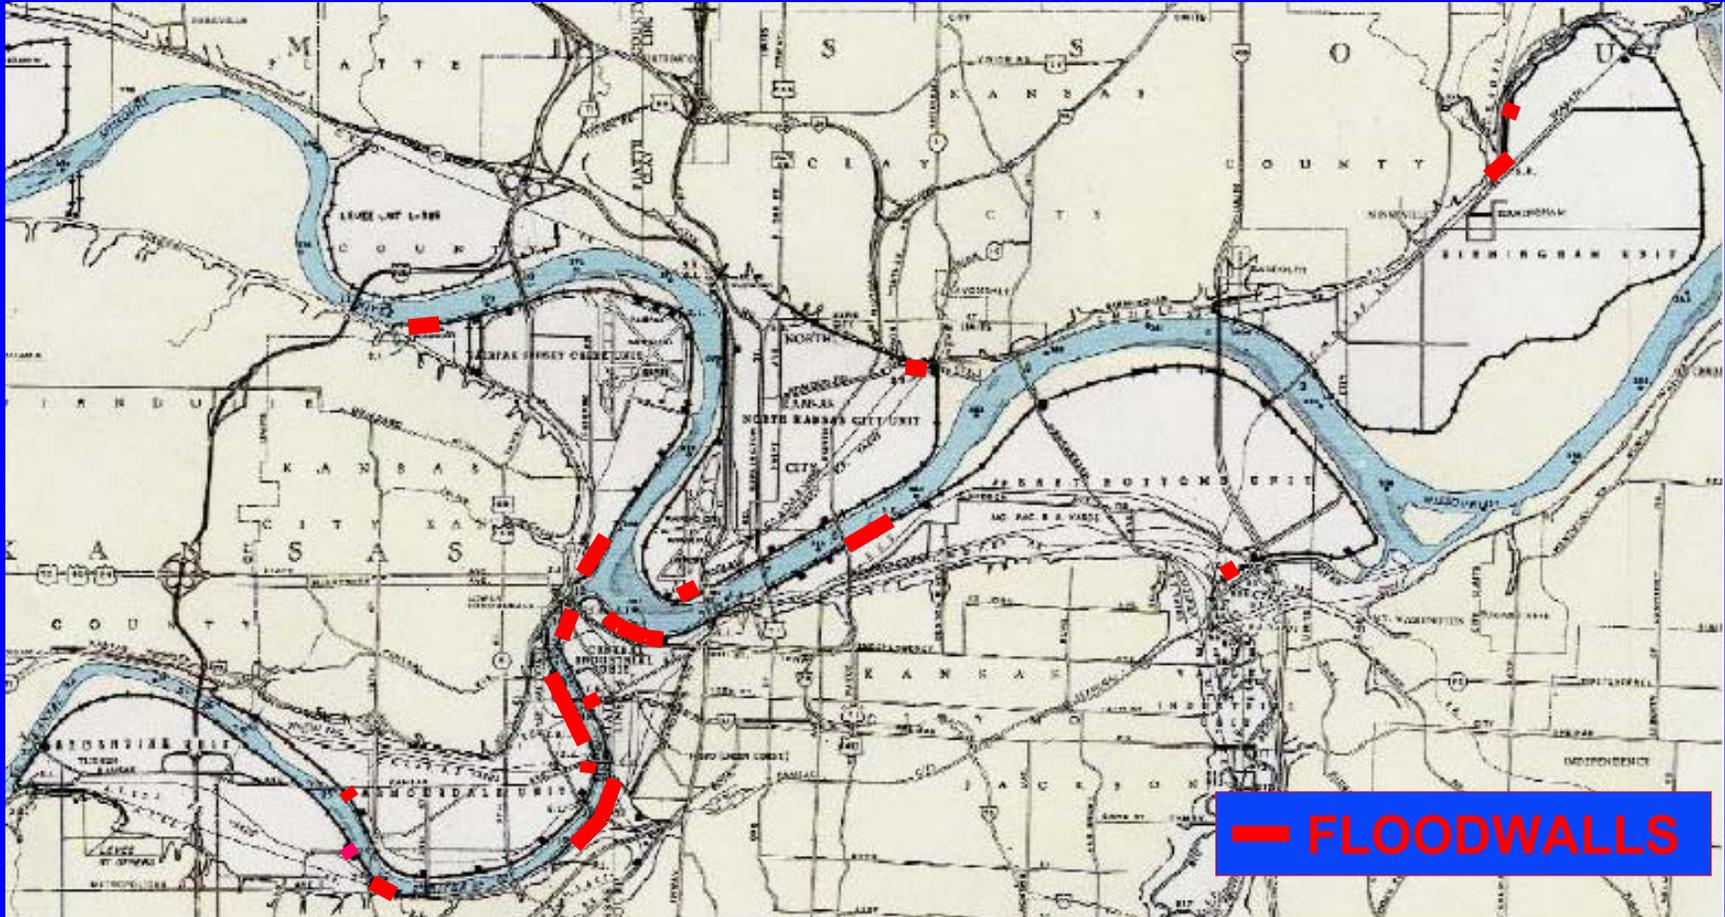

Levee and Floodwall Features within the Overall System

- 51 miles of flood protection comprised of:
 - 44.6 miles of Earthen Levee
 - 6.4 miles of floodwall
 - Exposed floodwall heights = 2 to 16 ft

US Army Corps
of Engineers
Kansas City District

Floodwall Locations

US Army Corps
of Engineers
Kansas City District

Floodwalls vs. Levees

Use Often Depends on Location

Earthen levee slopes are broad 1v:3h or 1v:4h

Floodwalls are essentially vertical

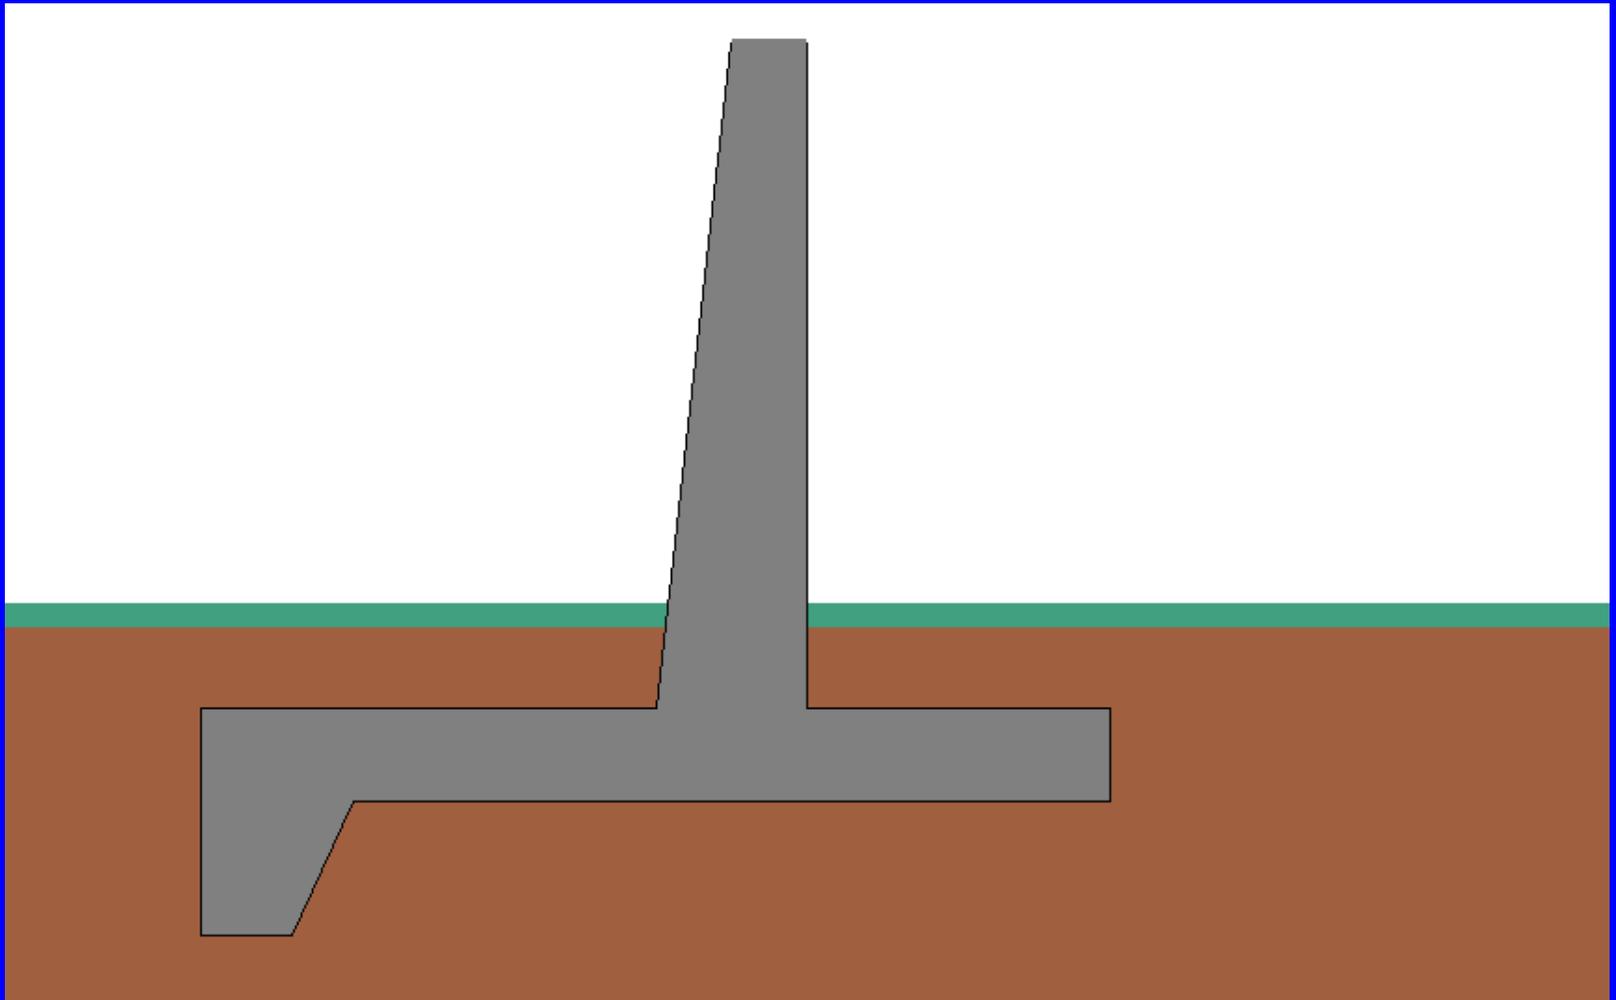

US Army Corps
of Engineers
Kansas City District

Initial Technical / Economic Analysis for Each Levee Unit

1. Hydrologic Reliability
2. Geotechnical Reliability
3. Structural Reliability
4. **Economic Investment and
Estimated Flood Damages**

US Army Corps
of Engineers
Kansas City District

Economic Importance of the Existing System

- System protects over 5000 structures
- Businesses within the protected areas employ about 90,000 people
- Extensive rail and road systems within the protected areas... of regional and national importance
- Downtown airport and several vital utilities

US Army Corps
of Engineers
Kansas City District

Economic Performance of Existing Project

Completed Project

Construction Cost: \$42.4 million*

Cumulative Damages

Prevented Through 2002: \$8.8 billion**

*U.S. Army Corps of Engineers Annual Report FY 2001, Kansas City District

**Kansas City District, Annual Report, Flood Damages Prevented

US Army Corps
of Engineers
Kansas City District

Economic Assessment Summary

- **Determination of extent, \$ value, and susceptibility to flood damage of the properties within protected areas.**
- **Calculation of the benefits associated with potential reliability improvements**
- **Comparison of benefits and costs of various alternatives, and optimization of the various alternatives to determine the National Economic Development (NED) Plan.**

US Army Corps
of Engineers
Kansas City District

Looking Ahead: Potential Reliability Improvement Measures

- Depending on the variables involved at each area of interest... will probably look at:
 - No Federal Action
 - channel and bank line modifications
 - increased levee height
 - improved underseepage control
 - improved levee foundation
 - improved structural performance
 - flood proofing (initial look at the KCMO BWWT plant)
 - various pump station improvements/replacements for interior ponding near toe of levee and underseepage concerns
 - Etc...

US Army Corps
of Engineers
Kansas City District

National Environmental Policy Act of 1969, As Amended NEPA

- Consider the environmental consequences of an action equally with economics and technical factors early in the planning stages and prior to decision.
- Undertake the NEPA process concurrently with feasibility studies, economic analyses, and other analyses of alternatives.
- Take actions that protect, restore, and enhance the environment.
- Provide decision-maker with a comparison of environmental impacts resulting from alternative actions.
- Provide opportunity for public input to the decision-making process.

US Army Corps
of Engineers
Kansas City District

Goals of Initial Public Meeting

- Provide information to the public on the proposed project and potential alternatives
- Identify any significant issues concerning potential alternatives or resources that may be impacted by the proposed action
- Identify any unknown alternatives or variations on alternatives

US Army Corps
of Engineers
Kansas City District

EIS/Evaluation Report Process

- Corps will prepare an Evaluation Report and Environmental Impact Statement (EIS)
- Reports will address hydrologic, geotechnical and structural reliability of the levee system, resources in the project area, and the economic and environmental impact of proposed alternatives.
- Preliminary public/agency input through September 22, 2003.
- Early-2005 Draft Reports – Public Review/Meeting.
- Mid-2005 Final Reports – Public Review.
- Approved Reports and Formal Decision in Late 2005.

US Army Corps
of Engineers
Kansas City District

Evaluating Impacts

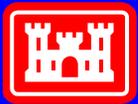

- Human Safety
- Economics
- Recreation
- Fish & Wildlife
- Water Supply
- Navigation
- Flood Control
- Transportation
- Wetlands
- Water Quality
- Agricultural Activity
- Cultural Resources
- Threatened & Endangered Species
- Aesthetics
- Public Service
- Land Use
- Vegetation

US Army Corps
of Engineers
Kansas City District

Coordinating Agencies

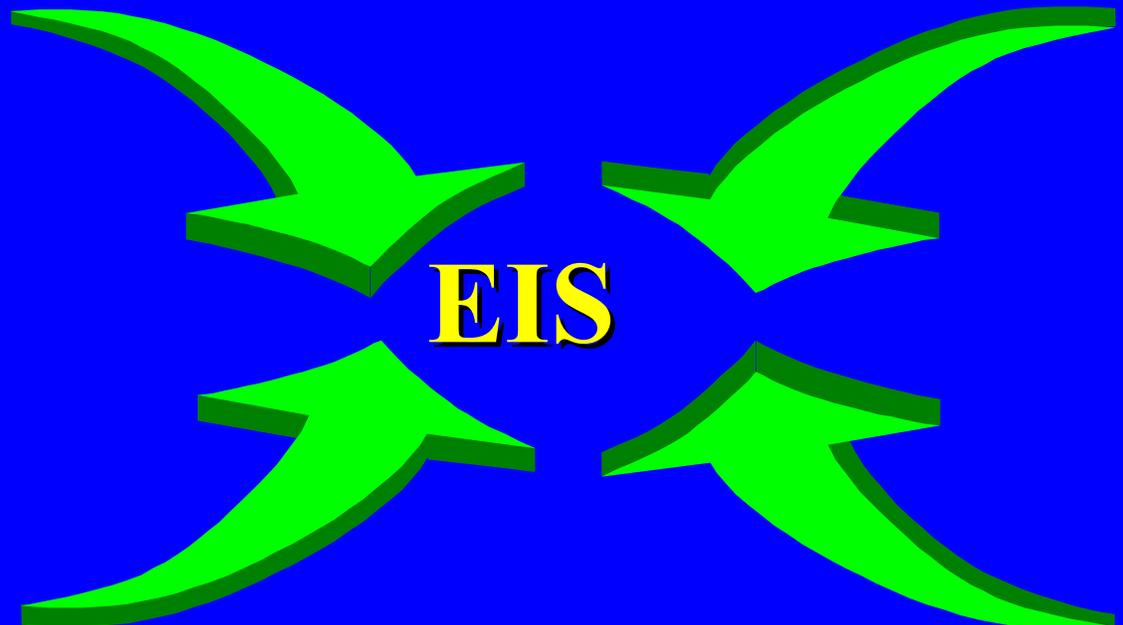

- Held Agency Information/Scoping Meeting on August 7, 2003
- Coordinating agencies include local, state and Federal – Kansas & Missouri
- Purpose - Gain input for the environmental review process on areas that these agencies have special expertise

US Army Corps
of Engineers
Kansas City District

Agency and Public Input into Process

- We need your help, cooperation, coordination, and input to make this process work.

US Army Corps
of Engineers
Kansas City District

Input to Study

1. Request your input **by Sep. 22, 2003**
2. Impacts to Resources
3. Comments on Concepts + or -
4. Additional Concepts
