1 INTRODUCTION

This Hazardous, Toxic, and Radioactive Waste (HTRW) assessment was performed to determine the environmental conditions associated with the Lower Missouri (LOMO) Jefferson City L-142 project. This assessment was performed by the U.S. Army Corps of Engineers (USACE) Kansas City District Environmental Engineering Branch, Environmental Support Services Section. The objective of the HTRW assessment is to provide early identification of potential HTRW issues that may be encountered along the levee project area. The assessment identifies potential hazards via soil, surface water, and groundwater contaminant pathway interactions that may occur during project construction. Examples of potential HTRW issues would be evidence of buried waste, contaminated soil or groundwater, or buried underground tanks which would impact the project area.

The project location is generally located in Callaway County north of and partially in Jefferson City, Missouri and north of the Missouri River. A Google Earth KMZ file sketch of the project bounds (**Figure 1**) was used as the area of investigation for this HTRW Assessment.

The Scope of Work of the LOMO Jefferson City L-142 project states the purpose of the project is to investigate and provide a recommendation to reduce the risk to flood damage and improve resiliency for property, businesses, agriculture, and infrastructure in and around the area of Jefferson City, MO and L-142 through structural and/or nonstructural means. The study will investigate and update the analysis for L-142, which is an unconstructed unit of the Missouri River Levee System (MRLS) authorized by the 1941 (Public Law) and 1944 Flood Control Acts, and develop a sustainable project to protect critical investment and lives. This will be conducted through evaluating the affected area, formulating measures by utilizing existing information to the extent practicable, building an array of alternative plans, and recommending an alternative for implementation.

2 HTRW SITE ASSESSMENT PROCESS

The HTRW Assessment is part of the feasibility process to evaluate potential HTRW areas of concern with respect to the proposed project location. This assessment describes properties in the area of the proposed project location that have the potential to release HTRW contaminants to the environment, which could directly impact proposed designs and construction of those designs.

To identify all potential HTRW areas of concern to the extent practical, the following activities were performed as part of the document search and assessment:

- Queried Missouri Geological Survey (MGS) Well Completion Records for monitoring, oil and gas, water, and other wells, which would potentially indicate historical contamination, contaminant monitoring, or future contamination potential.
- Accessed Missouri Department of Natural Resources (MDNR) E-START database for nearby potential environmental hazards. See **Appendix B**.
- Reviewed Google Earth imagery of the proposed project areas to confirm potential HTRW hazards by observable surface features.
- Queried the U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) database in Envirofacts to retrieve Superfund data.
- Accessed ECHO, EPA's website for Enforcement and Compliance History Online.
- Accessed EnviroMapper for Envirofacts. This Web site provides access to several EPA databases that provide information about environmental activities that may affect air, water, and land anywhere in the United States.
- Purchased and reviewed an environmental database report of a Government Records Report from Envirosite Corporation that focused on the project bounds. See Appendix A.
- Reviewed previous HTRW Assessment from General Reevaluation Report Missouri River Levee System Unit L124 Jefferson City, Missouri April 2001. See Appendix C.

Based on findings from the above activities, seventeen (17) properties or areas of concern located within the bounds of the project site were identified and assessed. Note that ownership information may be inaccurate or have changed.

The properties include:

1. Lauf Equipment (Old Shop)
2. Spectraglaze-Midwest Block & Brick: Midwest Cement Co. and Capitol Concrete
3. Old Luebbring Oil Site
4. MFA Petro-Card
5. Break Time #M10
6. Parcel 10 Car Key Motors
7. Ryder Student Transportation Company
8. Wastewater Treatment Plant (WWTP) or Water Pollution Control Plant
9. Missouri Valley Feeds
10. ABB Power

11. Lauf Equipment
12. Jefferson City Memorial Airport
13. Industrial Aviation Company
14. Former MFA Oil Bulk Plant
15. K & K Mobile Home Sales and Supply
16. Army Aviation Support Facility
17. Memorial Airport-Missouri Aviation Hangar

See **Figure 2** for all the properties of interest locations.

3 HTRW ASSESSMENT FINDINGS

This section describes each of the seventeen (17) individual properties which could potentially affect the proposed project area. The potential to affect the project area was determined by known contaminant spill history, presence of underground storage tanks, known regulatory compliance violations, and proximity to the proposed levee project. Other information obtained via the database search includes general contact information, industry classification, Resource Conservation and Recovery Act (RCRA) generator/non-generator status, and potential waste/contaminants present at the property.

3.1 Lauf Equipment (Old Shop)

Owner: Jefferson City Oil Company

Address: Oil Well Road Cedar City

A petroleum or hazardous substance storage tank closure or regulated release was addressed prior to the adoption of the 2004 Missouri Risk-Based Corrective Action (MRBCA) Guidance for Petroleum Storage Tanks. An evaluation found that no further action was warranted based on the tank closure or corrective action process in use at the time. The tank(s) have been either removed or abandoned in place.

Potential HTRW Hazards: No potential HTRW hazards are expected since a No Further Action Letter was issued. Potential to encounter contaminated soil is limited.

3.2 Spectraglaze-Midwest Block & Brick: Midwest Cement Co. and Capitol Concrete

Owner: Midwest Cement Company

Address: 164 Katy Road

1. The former Spectraglaze facility was an operation where glazing was applied to concrete blocks for use in architectural landscaping applications. Heat from a fire at the plant in 1999 caused a release of trichloroethene (TCE) into the soil on the south side of the plant. Remedial action was applied. However, the chlorinated solvents were not adequately attenuated. Currently, there is a prohibition of the use of groundwater and drilling at the site.
2. A petroleum or hazardous substance storage tank closure or regulated release was addressed prior to the adoption of the 2004 MRBCA Guidance for Petroleum Storage Tanks. An evaluation found that no further action was warranted based on the tank closure or corrective action process in use at the time. The tank(s) have been either removed or abandoned in place.

Potential HTRW Hazards: Potential HTRW hazards are expected at the site as discussed in the first numbered paragraph. If possible, avoid construction in the area of the site. See **Figure 3**.

3.3 Old Luebbring Oil Site

Owner: Luebbering Oil Company, Inc.

Address: Old Hwy 63 North and Renz Road

In 1996, petroleum contaminated soil was encountered during excavation. Three underground storage tanks were removed, and fourteen truckloads of contaminated soil was excavated and disposed of. After review, a No Further Action letter was issued by MDNR.

Potential HTRW Hazards: No potential HTRW hazards from this spill are expected. Potential to encounter contaminated soil is limited.

3.4 MFA Petro-Card

Owner: Midstate Industries

Address: 925 Cedar City Drive

A petroleum or hazardous substance storage tank closure or regulated release was addressed prior to the adoption of the 2004 MRBCA Guidance for Petroleum Storage Tanks. An evaluation found that no further action was warranted based on the tank closure or corrective action process in use at the time. The tank(s) have been either removed or abandoned in place.

Potential HTRW Hazards: No potential HTRW hazards from this release are expected. Potential to encounter contaminated soil is limited.

3.5 Break Time #M10

Owner: Former Jr. Food of Arkansas

Address: Southeast corner of 4th and Cedar

A petroleum or hazardous substance storage tank closure or regulated release was addressed prior to the adoption of the 2004 MRBCA Guidance for Petroleum Storage Tanks. An evaluation found that no further action was warranted based on the tank closure or corrective action process in use at the time. The tank(s) have been either removed or abandoned in place.

Potential HTRW Hazards: No potential HTRW hazards from this release are expected. Potential to encounter contaminated soil is limited.

3.6 Parcel 10 Car Key Motors

Owner: MFA Agri Services

Address: NW Corner of Hwy W & Hwy 54

A petroleum or hazardous substance storage tank closure or regulated release was addressed prior to the adoption of the 2004 MRBCA Guidance for Petroleum Storage Tanks. An evaluation found that no further action was warranted based on the tank closure or corrective action process in use at the time. A Closure letter was sent by the MDNR on 6 February 1990 finding no additional investigation is warranted. The tank(s) have been either removed or abandoned in place.

Potential HTRW Hazards: No potential HTRW hazards from this release are expected. Potential to encounter contaminated soil is limited.

3.7 Ryder Student Transportation Company

Owner: Jefferson City Parks and Recreation

Address: 810 Sandstone Cedar City, MO 65022

A petroleum or hazardous substance storage tank closure or regulated release was addressed prior to the adoption of the 2004 MRBCA Guidance for Petroleum Storage Tanks. An evaluation found that no further action was warranted based on the tank closure or corrective action process in use at the time. The tank(s) have been either removed or abandoned in place.

Potential HTRW Hazards: No potential HTRW hazards from this release are expected. Potential to encounter contaminated soil is limited.

3.8 Wastewater Treatment Plant (WWTP) or Water Pollution Control Plant

Owner: City of Jefferson Missouri

Address: 401 Mokane Road Jefferson City

A petroleum or hazardous substance storage tank closure or regulated release was addressed prior to the adoption of the 2004 MRBCA Guidance for Petroleum Storage Tanks. An evaluation found that no further action was warranted based on the tanks closure or corrective action process in use at the time. The tanks have been either removed or abandoned in place. No Further Action letters were issued in 1994 regarding 1-4,000 gallon diesel and 1-7,300 gallon ferric chloride tank.

Potential HTRW Hazards: No potential HTRW hazards from this release are expected. Potential to encounter contaminated soil is limited.

3.9 Missouri Valley Feeds

Owner: Missouri Valley Feeds

Address: Fourth Street Cedar City

A petroleum or hazardous substance storage tank closure or regulated release was addressed prior to the adoption of the 2004 MRBCA Guidance for Petroleum Storage Tanks. An evaluation found that no further action was warranted based on the tank closure or corrective action process in use at the time. The two diesel tanks have been closed in place.

Potential HTRW Hazards: No potential HTRW hazards are expected since a No Further Action Letter was issued. Potential to encounter contaminated soil is limited.

3.10 ABB Power (currently Hitachi Energy)

Owner: AB Power T & D Company

Address: 500 Highway 94, Jefferson City, MO

This site was found to have a storage tank(s) that leaked a petroleum substance in approximately 1990. It had been closed by the MDNR tanks section with a No Further Action Letter, but that letter was rescinded as contamination was found in 2000 after sampling the area. The site contamination is likely being addressed by another program such as the Hazardous Waste Program or the Water Pollution Control Program.

Potential HTRW Hazards: Potential HTRW hazards are expected at site. If possible, avoid construction in the area of the site. See **Figure 4**.

3.11 Lauf Equipment

Owner: Lauf Equipment Company

Address: Hwy 94 Cedar City

A petroleum or hazardous substance storage tank closure or regulated release was addressed prior to the adoption of the 2004 MRBCA Guidance for Petroleum Storage Tanks. An evaluation found that no further action was warranted based on the tank closure or corrective action process in use at the time. The tank(s) have been either removed or abandoned in place.

Potential HTRW Hazards: No potential HTRW hazards expected since a No Further Action Letter was issued. Potential to encounter contaminated soil is limited.

3.12 Jefferson City Memorial Airport

Owner: Jefferson City Memorial Airport

Address: 507 Airport Rd. Jefferson City

This is an Underground Tank Facility with no known releases to environment.

Potential HTRW Hazards: Potential HTRW hazards are not expected at this site.

3.13 Industrial Aviation Company

Owner: Industrial Aviation Company

Address: Memorial Airport - Box 831

A petroleum or hazardous substance storage tank closure or regulated release was addressed prior to the adoption of the 2004 MRBCA Guidance for Petroleum Storage Tanks. An evaluation found that no further action was warranted based on the tank closure or corrective action process in use at the time. The tank(s) have been either removed or abandoned in place.

Potential HTRW Hazards: No potential HTRW hazards expected since a No Further Action Letter was issued. Potential to encounter contaminated soil is limited.

3.14 Former MFA Oil Bulk Plant

Owner: MFA Oil Company

Address: 703 Hibernia St Jefferson City

A petroleum or hazardous substance storage tank closure or regulated release was addressed under the MRBCA Guidance for Petroleum Storage Tanks. Evaluation of environmental media found that concentrations of any remaining contaminants, if present, do not pose an unacceptable risk to human health or the environment provided that Activity and Use Limitations applied to this property remain in place.

Potential HTRW Hazards: A remediation project was completed. However, potential HTRW hazards are expected as this site must remain non-residential with no domestic consumption of drinking water. If possible, avoid construction in the area of the site. See **Figure 5**.

3.15 K & K Mobile Home Sales and Supply

Owner: Vitran Express

Address: 625 Hibernia St Jefferson City

A petroleum or hazardous substance release is currently being addressed under the MRBCA Guidance for Petroleum Storage Tanks.

Potential HTRW Hazards: There is a potential HTRW hazards at this site. However, information during records review of this facility was limited. If possible, avoid construction in the area of the site. See **Figure 5**.

3.16 Army Aviation Support Facility

Owner: Missouri Army National Guard

Address: Memorial Airport Hwy 94 Jefferson City

A petroleum or hazardous substance storage tank closure or regulated release was addressed prior to the adoption of the 2004 MRBCA Guidance for Petroleum Storage Tanks. An evaluation found that no further action was warranted based on the tank closure or corrective action process in use at the time. The tank(s) have been either removed or abandoned in place.

Potential HTRW Hazards: No potential HTRW hazards expected since a No Further Action Letter was issued. Potential to encounter contaminated soil is limited.

3.17 Memorial Airport-Missouri Aviation Hangar

Owner: Missouri Army National Guard

Address: Memorial Airport

A petroleum or hazardous substance storage tank closure or regulated release was addressed prior to the adoption of the 2004 MRBCA Guidance for Petroleum Storage Tanks. An evaluation found that no further action was warranted based on the tank closure or

corrective action process in use at the time. The tank(s) have been either removed or abandoned in place.

Potential HTRW Hazards: No potential HTRW hazards expected since a No Further Action Letter was issued. Potential to encounter contaminated soil is limited.

4 CONCLUSIONS

An HTRW Assessment was performed in order to identify potential hazards associated with soil and groundwater contaminant pathways at the proposed LOMO Jefferson City L-142 project site location. Queries of various state and federal environmental databases were performed to obtain potential environmental hazard location and information. HTRW hazards were identified in the location of the proposed project area. There were a total of four properties that likely have contamination present and should be avoided during the construction phase of this project: the Spectraglaze-Midwest Block & Brick, the Former MFA Oil Bulk Plant, the ABB Power Company site and the K&K Mobile Home site. Additionally, the ABB Power Company site and the K&K Mobile Home site also have use limitations which place restrictions on how the property can be used. No other known HTRW contamination was identified within the project location boundary.

Facility Summary

Program System ID :	MO0000002902700019
Facility Registry ID :	110001448675
EPA Region :	EPA Region 7 - IA, KS, MO, NE
SIC :	3612 - POWER, DISTRIBUTION, AND SPECIALTY TRANSFORMERS
NAICS :	335311 - Power, Distribution, and Specialty Transformer Manufacturing
Facility Type :	Privately Owned Facility
Air Pollutant Class :	Major Emissions
Air Operating Status :	Operating
Current High Priority Violation (HPV):	No Violation Identified
Local Control Region Name :	N/R
Last Date in Agency List :	2023-01-23

Air Pollutant Details

Program System ID :	MO0000002902700019
Pollutant :	VOLATILE ORGANIC COMPOUNDS (VOCS)
Substance Registry Services ID (SRS):	761346
Chemical Abstract Service Number :	N/R
Air Pollutant Class :	Major Emissions

Air Violation History Details

HPV Day Zero Date :	1997-04-30
HPV Resolved Date :	1999-09-09
Program System ID :	MO0000002902700019
Activity ID :	3400384066
Agency Type :	State
State Code :	MO
Air Local Control Region Code (LCON):	N/R
Comp Determination UID :	MO000A0000290270001900010
Enforcement Response Policy :	High Priority Violation
Program :	State Implementation Plan for National Primary and Secondary Ambient Air Quality Standards
Pollutant :	VOLATILE ORGANIC COMPOUNDS (VOCS)
Earliest Determination Date of Federally Reportable Violation (FRV):	N/R

Waste Activity Monitoring

Report Cycle :	2021
Hazardous Waste Page Number :	1
Hazardous Waste Sub-Page Number :	1
BR Form :	GM
Waste Description :	EXPIRED PVC CEMENT
Primary NAICS :	335311 - Power, Distribution, and Specialty Transformer Manufacturing
Source Code :	G11 - Discarding off-specification, out-of-date, and/or unused chemicals or products
Form Code :	W210 - Reactive or polymerizable organic liquids and adhesives (fluid but not sludge)
Management Method :	N/R
Generation Tons :	0.025
Managed Tons :	0
Shipped Tons :	0
Received Tons :	0
Receiver ID :	N/R
Receiver State :	N/R
Shipper ID :	N/R
Shipper State :	N/R
Waste Minimization :	B - Cont. initiative to recycle waste on- or off-site
Waste Code List :	D001, D035, U002
Waste Code Group :	U002 - 2-PROPANONE (I) (OR) ACETONE (I)
Waste Generation Type :	N/R

Report Cycle :	2021
Hazardous Waste Page Number :	2
Hazardous Waste Sub-Page Number :	1
BR Form :	GM
Waste Description :	SCRIBLEX LAB WASTE
Primary NAICS :	335311 - Power, Distribution, and Specialty Transformer Manufacturing
Source Code :	G02 - Stripping and acid or caustic cleaning (using caustics to remove coatings or layers from parts or assemblies)
Form Code :	W204 - Concentrated halogenated/ non-halogenated solvent mixture
Management Method :	N/R
Generation Tons :	0.01

Source Description

Source Description :

AIR contains compliance and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
AFS contains compliance and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.
CEDRI is the EPA Compliance and Emissions Data Reporting Interface and combines data about emissions source tests, continuous emissions monitoring, and compliance and emissions reports.

FRS ***(cont.)***

Source Description : ICIS provides a database that, when complete, will contain enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The MO-DNR includes a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework.
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
OSHA-OIS

Source Description : RCRAInfo is EPA’s comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.
TRIS is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.
CEDRI is the EPA Compliance and Emissions Data Reporting Interface and combines data about emissions source tests, continuous emissions monitoring, and compliance and emissions reports.
ICIS provides a database that, when complete, will contain enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The MO-DNR includes a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework.
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
OSHA-OIS

Source Description :

RCRAInfo is EPA’s comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

TRIS is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

Installation Description :

ABB Enterprises Software, Inc. manufactures commercial and residential electrical distribution transformers. The installation consists of both 1-phase and 3-phase transformer production lines including various paint booths, curing ovens, boilers, process heaters, miscellaneous combustion units, two (2) cooling towers, emergency diesel generator, diesel fire pump engine, and aqueous and non-aqueous solvent parts washers. The installation is a major source for hazardous air pollutants (HAPs) and volatile organic compounds (VOCs).

Installation Description :

ABB Inc. - Jefferson City manufactures pad mounted, distribution transformers for use in subdivisions and small industries. ABB has estimated that their facility in Jefferson City, MO can produce 40 large three phase transformers, 60 small three phase transformers, and 227 single phase transformers per day. Transformer cases are washed and sent through a primer coating process, after which they are dried in natural gas fired dryers. The facility is a synthetic minor source, with a 249 ton per year cap for VOC and a major source for HAPs. With the issuance of this permit, ABB will install four (4) aromatic polyurea spray elastomer systems and spray booths with emissions below de minimis. ABB was issued a Part 70 Operating Permit No. 2010-008A.

Additional Information :

The caller reports a leaking transformer lost 10 gallons of non-PCB mineral oil. The facility manufactures transformers and the leaker was a new one that had a leaking bushing. It had been placed on a concrete pad where the oil leaked. The caller stated that the spill was entirely contained to the concrete pad. Sorbents were used to remove the spill, and microblaze was applied to the concrete to help degrade any residual.

Additional Information :

A large electrical transformer was being loaded onto a truck and slipped off the forklift. 25 gallons of oil was lost from the transformer inside the building and five gallons was lost to a storm drain inside the building. The storm drain empties into an on-site retention pond that is monitored regularly for discharges from the building. There was no visual observance of oil and the pond is frozen over. Continual observance will be conducted. This transformer's capacity is 270 gallons.

Reported Chemical Information

Details for this site have been truncated due to the large number of available details for this site within this dataset. For the complete details for this site, contact your Envirosite account representative for a complimentary site report containing all of the details available.

Reporting Year :	2019
Document Control Number :	1319218369282
CAS Number :	N230
Chemical Name :	CERTAIN GLYCOL ETHERS
Unit of Measure :	Pounds
Maximum Amount Onsite :	03

Reporting Year :	2019
Document Control Number :	1319218369306
CAS Number :	007440473
Chemical Name :	CHROMIUM
Unit of Measure :	Pounds
Maximum Amount Onsite :	03

Reporting Year :	2019
Document Control Number :	1319218310732
CAS Number :	007439965

Source Description
Source Description : AQS contains ambient air pollution data collected by EPA, State, Local, and Tribal air pollution control agencies from thousands of monitoring stations.
The MO-DNR includes a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework.

Source Description
Source Description :

The MO-DNR includes a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework.
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description
Source Description : AIR contains compliance and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies. AFS contains compliance and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.

Source Description : The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.
The MO-DNR includes a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework.

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description

Source Description :

The MO-DNR includes a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

AUL - MO

Facility Name :	Spectraglaze-Midwest Block & Brick
Facility Address :	164 Katy Road, Jefferson City, 65101-5034
County :	Callaway County
Certificate of Completion Issued :	2015-10-01
Application Received :	2007-09-17
Activity Status :	Cert. of Completion Issued/AULs
Activity Use (AULs) :	Restrictive Covenant
Contaminants :	TCE
Operable Unit :	Midwest Cement Co.
State Funded :	N/R
Federal Funded :	N/R
Acreage :	7.67
Northing :	4273223.703
Easting :	572733.985
Manager :	Brian McCurren

Site Description :

The former Spectraglaze facility was an operation where glazing was applied to concrete block for use in architectural landscaping applications. Heat from a fire at the plant in 1999 caused expansion of contents inside a 55-gallon drum of trichloroethene (TCE). The pressure release valve on the drum allowed the release of TCE to the subsurface on the south side of the production building. A removal operation was conducted, with highly impacted soils being removed and properly disposed. Several monitoring wells were installed to characterize and monitor groundwater impacts. Monitoring showed that groundwater was impacted and the plume had spread. The owner applied to the Brownfields/Voluntary Cleanup Program (BVCP) for oversight of further characterization and remedial action.

Source Description

Source Description :

The MO-DNR includes a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework.
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Additional Information :

Spill Summary: THE CALLER REPORTS A DELIBERATE FIRE THAT INVOLVES TIRES, SHINGLES AND A PROPANE TANK. Response Summary: THE LOCAL FIRE DEPARTMENT RESPONDED TO EXTINGUISH THE FIRE. THE EER REFERRED THE INCIDENT TO THE JEFFERSON CITY REGIONAL OFFICE FOR FOLLOWUP INVESTIGATION. Additional Information: A COPY OF THIS DRAFT REPORT WAS FAXED TO THE JCRO ON THE MORNING OF 4/24/02. ACCORDING TO THE CALLER, THE SITE IS LOCATED 2 MILES EAST OF THE ABB PLANT ON THE RIGHT SIDE OF HWY 94 TRAVELLING EAST FROM JEFFERSON CITY. THE FIRE WAS BURNING ON THE INSIDE BANK OF A POND AND LIKELY CANNOT BE SEEN FROM THE HIGHWAY (IT APPEARED TO THE FIRE DEPT THAT IT WAS DELIBERATELY HIDDEN). THE FIRE DEPT CONTACTED THE PROPERTY OWNER, MR. JERRY FINE, WHO CLAIMED THERE WAS NOTHING ILLEGAL GOING ON AND THAT HE REFUSED TO EXTINGUISH THE FIRE. THE SIZE OF THE BURN WAS 15 FT BY 15 FT BY 10 FT TALL. THE FIRE DEPT. STATED THAT THERE WERE MANY TIRES AND ASPHALT SHINGLES INVOLVED IN THE FIRE AND THAT THEY WERE HAVING DIFFICULTIES EXTINGUISHING THE FIRE.

Additional Information :

On 5/6/07 at 1230 hours, the EER was contacted by Mr. Adam Gresham, DNR Deputy Division Director, regarding a possible propane release at the Jefferson City Airport. EER contacted the Jefferson City Police Department which is where the original report came from. JCPD relayed that the release was due to a malfunctioning valve on an above ground pipeline. JCPD had contacted AMEREN who will fix the problem.

Additional Information :

Pattie Ritchie and others in the Lewis and Clark Building reported seeing 3 blue barrels floating in front of a barge on the north shore of the Missouri River. The barrels are reportedly plastic and appear to be sealed. Caller also states she does not see any access to this site from the ground; a water investigation may be required. The barrels appear to be floating on top of other debris. 6/17 EER (Cortvrient) assessed the situation and determined the river and the position of the barrels are too dangerous to perform a recovery. The barrels are floating high and they were most likely used as dock floats and contain no material.

Additional Information :

The caller reported that while hiking along a levy in Cedar City (North Jefferson City), she noticed a blue pipe that lay along the ground running from the north side of the levy down towards Turkey Creek. It looked suspicious and appeared as though it was being used for some type of illegal disposal, although she stated there were no obvious odors, chemical residue, or dead vegetation observed, but that she didn't look at the end of the pipe near the creek, only the up gradient end. While this report might normally be routed to NERO for a complaint investigation, since it was so close to Jefferson City, ESP-EER investigated it on 12/30/13 and found no indication of any illegal dumping or chemicals involved. There is a flexible 4" hose laying on the ground at the location described, but it appears to be used to transfer water either over the levy or pump water out of Turkey Creek. There was some silt in the hose, but no odors, dead vegetation or chemical residues noted at either end of the hose. It appears that the hose is used to periodically transfer water and there are crude steps carved into the bank of Turkey Creek adjacent to the hose that makes it easier for people to walk up and down the bank when working with the hose or moving a pump, etc. Based upon observations, there is no further action needed.

Additional Information :

An applicator truck overheated and burped material out the vent pipe on the truck to the parking lot and road ditch. The RP applied aggregate and recycled asphalt to the hot oil to facilitate hardening. The RP is returning on 9/12/14 to remove the hardened material for recycling at the RP's Columbia, MO plant. No waterways were affected. SOSC Turner will meet the RP and complete a Hazardous Substance Declaration form.

Longitude :	N/R

Additional Information :

Spill Summary: CONTRACTOR REPORTED THAT HE DISCOVERED PETROLEUM CONTAMINATION WHILE EXCAVATING A CANOPY POLE. Response Summary: JCRO AND THE LUST UNIT WILL BE NOTIFIED FOR FOLLOW UP INVESTIGATIONS. Additional Information: 02/27/96 LDA - Mr. Loftis indicated that he came upon petroleum contaminated soil that became more saturated as he dug deeper. He also said that he struck a line in another area that still contained raw fuel. He said that the deep hole was filled back in, but the line is still exposed.

Additional Information :

Spill Summary: THE CALLER REPORTS WITNESSING AN UNIDENTIFIED CITIZEN PREPARING TO DUMP SOLID WASTE INTO A DRAINAGE DITCH. Response Summary: THE EER REFERRED THIS INCIDENT TO THE SOLID WASTE MANAGEMENT PROGRAM AND THE DEPARTMENT'S CRIMINAL INVESTIGATOR. Additional Information: THE CALLER DROVE SLOWLY PAST A CITIZEN PREPARING TO DUMP SOLID WASTE INTO A DRAINAGE DITCH, WHICH ALERTED THE APPARENT DUMPER AND RESULTED IN HIM NOT DUMPING THE MATERIAL THE CALLER REPORTS THE VEHICLE WAS AN OLD RED PICKUP, POSSIBLY A FORD. THE LICENSE NUMBER WAS PROVIDED AS 227 CA2. EER ADVISED THE CALLER TO NOTIFY LOCAL LAW ENFORCMENT OFFICIALS OF THE INCIDENT. THE CALLER ALSO RELAYED PERSONNALLY KNOWING TERRY BALL, MDNR CRIMINAL INVESTIGATOR. EER ADVISED THE CALLER (WHO WANTED TO REMAIN ANONYMOUS) TO CONTACT MR. BALL DIRECTLY. EER WILL ALSO FORWARD A COPY OF THIS REPORT TO MR. BALL ELECTRONICALLY FOR ANY FOLLOW-UP. THE CALLER RELAYED THE LOCATION OF THE 'ALMOST' DUMPING TO BE ON OLD 94, AKA MOKANE ROAD, AT THE FIRST BRIDGE OF THE CEDAR CITY DRAINAGE DISTRICT.

Source Description

Source Description :

AIR contains compliance and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies. AFS contains compliance and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies. The MO-DNR includes a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework.
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description

Source Description :	The MO-DNR includes a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework. The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Last Date in Agency List : 2023-02-13

Source Description
Source Description : The MO-DNR includes a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework.
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description

Source Description :

The MO-DNR includes a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework.
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description

Source Description :

The MO-DNR includes a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework.

Source Description :

RCRAInfo is EPA’s comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

Source Description

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

Additional Information :

Caller reports an abandoned 2.5-gallon jug that is 2/3 full of an unknown liquid. Because of public safety concerns the container was moved to Rock Bridge State Park, 5901 State Highway 163, Columbia, MO. EER responded on April 22, 2021, to investigate. EER discovered that the jug contained water and it was disposed of in a maintenance building's sink while running a good amount of water down the drain with it.

Hazardous Waste Summary
Waste Code / Name : D001 - IGNITABLE WASTE
Waste Code / Name : F003 - THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
P106 - SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)
U009 - 2-PROPENENITRILE (OR) ACRYLONITRILE

Waste Code / Name :

F002 - THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Source Description

Source Description :

The MO-DNR includes a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Property Size :	147
Local Parcel Number :	N/R

Former Use :

The subject property encompasses approximately 147 acres including 47 acres within the former prison walls and is bounded by the Missouri River and Union Pacific Railroad to the north a privately owned parcel of land to the east Riverside Drive, Capitol Avenue, Lafayette Street, and East State Street to the south and a parcel of land owned by the Jefferson City Housing Authority to the west. The prison, which closed in 2004 after 168 years of continuous operation, is slated for redevelopment. To date, a State Public Health Laboratory SPHL and an office building Lewis and Clark Building for the Missouri Department of Natural Resources MDNR have been completed. A new federal courthouse is under construction at the northwest corner of the former prison however, this area had been deeded to the Federal Government and was not included in the Targeted Brownfields Assessment site area. Future redevelopment calls for additional government buildings, private retail development, and preservation of some historical prison buildings as a tourist attraction.

Additional Information :

Tim Brazzell with Office of Administration - Facilities Management, Design and Construction contacted the Department's State On-Scene Coordinatro (SOSC) Musick for assistance in locating buried prison cells at the former Missouri State Penitentiary. SOSC Musick responded on December 12, 2018 at 1000 hours and used the ground penetrating radar (GPR) to locate the cell block. Only the northern most side of the cell block was detected with the GPR. Obstructions in the area made it difficult to identify the remaining three sides. SOSC Musick will be returning to the site on December 18, 2018 to attempt to locate the remaining boundaries.

Source Description

Source Description :

The MO-DNR includes a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Comments :

7-29-04--rev. CR; requested signed statement/invoice from Mertens Oil Co. for recovered/unused product that removed from the USTs prior to closure and CR stated that 'recharged GW' was discharged to the sanitary sewer, therefore, an initial amt of GW must have been present to have recharged GW, so clarification/disposal docs need to be provided for initial GW--MP 12-7-04--rev. response to dept.'s request for deficient closure items; response adequately addessed remaining closure items; stated that closure is complete, but there is ongoing remediation and will be addressed under a separate cover (according to dbase, TC is PM)--MP

Facility Summary

Program System ID :	MO0000002905100001
Facility Registry ID :	110001449059
EPA Region :	EPA Region 7 - IA, KS, MO, NE
SIC :	4911 - ELECTRIC SERVICES
NAICS :	221111 - Hydroelectric Power Generation
Facility Type :	Privately Owned Facility
Air Pollutant Class :	Major Emissions
Air Operating Status :	Permanently Closed
Current High Priority Violation (HPV):	No Violation Identified
Local Control Region Name :	N/R
Last Date in Agency List :	2023-01-23

Air Pollutant Details

Program System ID :	MO0000002905100001
Pollutant :	FACIL
Substance Registry Services ID (SRS):	N/R
Chemical Abstract Service Number :	N/R
Air Pollutant Class :	Major Emissions

Map Id: D74
Direction: WSW
Distance: 0.375 mi., 1983 ft.
Elevation: 553 ft.
Relative: Higher

Earliest Determination Date of Federally Reportable Violation (FRV):	N/R

AUL - MO

Facility Name :	Jefferson City FMGP
Facility Address :	400 W. Main St., Jefferson City, 65101-1528
County :	Cole County
Certificate of Completion Issued :	2006-12-15
Application Received :	2001-02-08
Activity Status :	Cert. of Completion Issued/AULs
Activity Use (AULs) :	Monitoring Contract, Restrictive Covenant
Contaminants :	BTEX,Coal Tar,Metals,PAHs
Operable Unit :	Jefferson City FMGP
State Funded :	N/R
Federal Funded :	N/R
Acreage :	1.1
Northing :	4270595.08063
Easting :	571852.15012
Manager :	Chris Cady
Site Description :	This site is the location of a former manufactured gas plant (FMGP). Manufactured gas operations began around 1875 and ended in 1936.
Last Date in Agency List :	2023-01-17

BROWNFIELDS - MO

Facility Name :	Jefferson City FMGP
Facility Address :	400 W. Main St., Jefferson City, 65101-1528
County :	Cole County
Certificate of Completion Issued :	2006-12-15
Application Received :	2001-02-08

Waste Activity Monitoring

Report Cycle :	2007
Hazardous Waste Page Number :	1
Hazardous Waste Sub-Page Number :	1
BR Form :	GM
Waste Description :	WASTE AEROSOLS
Primary NAICS :	22121 - Natural Gas Distribution
Source Code :	G11 - Discarding off-specification, out-of-date, and/or unused chemicals or products
Form Code :	W001 - Lab packs from any source not containing acute hazardous waste
Management Method :	H141 - The site receiving this waste stored/bulked and transferred the waste with no treatment or recovery (H010-H129), fuel blending (H061), or disposal (H131-H135) at that receiving site.
Generation Tons :	0.004
Managed Tons :	0
Shipped Tons :	0.004
Received Tons :	0
Receiver ID :	MOD000610766
Receiver State :	MO
Shipper ID :	MOR000504225
Shipper State :	MO
Waste Minimization :	N/R

Source Description
Source Description : AIR contains compliance and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies. All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.
The MO-DNR includes a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Latitude :	38.5717
Longitude :	-92.15552
Additional Information :	Dave Dowdy with the Department's Land Reclamation Program found an abandoned glass jar with approximately one pound of mercury. It was located in the grass near the upper level parking lot at the Department's Lewis and Clark building. He believes it may be debris from the recent tornado. The duty officer took control of the mercury and will dispose of it properly.

Longitude :	-92.15547943

Additional Information :

EER was notified by email about a possible leak coming from a ground mounted transformer near the Lewis and Clark state office building. EER contacted Ameren UE and requested the transformer be checked and samples be taken if found to be leaking. EER requested Ameren report back to the Spill Line once the transformer was checked. EER was notified by an Ameren representative that all the transformers in the area were checked and none seemed to be leaking. No further actions is warranted.

Source Description

Source Description :

The MO-DNR includes a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework.
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Additional Information :

Spill Summary: THE CALLER REPORTS THAT MERCURY HAS BEEN RELEASED FROM A BROKEN SPHYGMOMANOMETER. Response Summary: THE EER RESPONDED TO THE SCENE AND UTILIZED A HEPA VAC TO REMOVE THE SPILLED MATERIAL. Additional Information: THE EER CONTACTED ROGER GILES WITH THE UMC ENVIRONMENTAL GROUP TO REQUEST THE USE OF THEIR HEPA VAC. KEN HANNON AND CORY JORGENSEN RESPONDED TO THE SPILL LOCATION AND USED THE HEPA VAC TO REMOVE THE SPILLED MATERIAL. ROGER GILES UMC (573) 864-3239

Additional Information :

The EER Spill Line was contacted by an employee of the Harry S Truman Building, downtown Jefferson City, MO regarding a milky white color to Wears Creek. Brad Harris, Jefferson City EER SOSC was in the area and drove by to look into the situation. OSC Harris discovered that Central Dairy (610 Madison St, Jefferson City) had a 300 gallon cream spill yesterday, 4/27/15, that went down into a storm drain that enters Wears Creek. He communicated with Northeast Regional Office Staff who were aware of the incident and reported that the City of Jefferson was the lead agency and overseeing clean-up of the incident.

Former Use :

304 Marshall Street includes approximately 0.07 acres of land and a two-story, 2,484 square foot single family residential home. The home is a brick structure that was constructed circa 1900 and is in the process of being rehabilitated to Housing Quality Standards and will be sold to an area median income (AMI) household. A Lead Risk Assessment and Asbestos Building Inspection, conducted on January 13, 2010, indicates the presence of Lead-based Paint (LBP) and Asbestos Containing Material (ACM) in the home.

Contaminants :	Asbestos,Lead-Based Paint
Operable Unit :	St. Mary's Hospital (former) - Hotel
State Funded :	Yes
Federal Funded :	N/R
Acreage :	9.8
Northing :	4270461.37
Easting :	571233.34
Manager :	Mike Washburn

Site Description : This portion of the site, part of the parcel located on the north side of Missouri Boulevard, was sold by F & F Development to H3 Hospitality, LLC shortly before the drafting of the environmental covenant for the property. As this tract is part of the main northern parcel, petroleum contamination in the soil was the concern.

Last Date in Agency List : 2023-01-17

Certificate of Completion Issued :	2020-01-09
Application Received :	2017-02-06
Activity Status :	Cert. of Completion Issued/AULs
Activity Use (AULs) :	Restrictive Covenant
Contaminants :	Asbestos,Lead-Based Paint

State Funded :	Yes
Federal Funded :	N/R
Acreage :	9.8
Northing :	4270398.084
Easting :	571224.642
Manager :	Mike Washburn

Site Description :

The original building of the former St. Mary's hospital was opened in 1905. Over the years the property was expanded to house more buildings and eventually include parcels on the south side of Missouri Boulevard. The hospital originally had a 7,500-gallon diesel fuel tank that was removed in 1993, for which it received a letter of "No Further Action" from the Department's Underground Storage Tanks Section. That tank was replaced with a 6,000-gallon diesel tank. Other concerns included former gas stations on the adjacent parcels, and asbestos and lead-based paint in the old building.

VCP - MO ***(cont.)***

Site Description :	This portion of the site, part of the parcel located on the north side of Missouri Boulevard, was sold by F & F Development to H3 Hospitality, LLC shortly before the drafting of the environmental covenant for the property. As this tract is part of the main northern parcel, petroleum contamination in the soil was the concern.
Last Date in Agency List :	2023-01-17
Certificate of Completion Issued :	2020-01-09
Application Received :	2017-02-06
Activity Status :	Cert. of Completion Issued/AULs
Activity Use (AULs) :	Restrictive Covenant
Contaminants :	Asbestos,Lead-Based Paint
Operable Unit :	St. Mary's Hospital (former)
State Funded :	Yes

Acreage :	9.8
Northing :	4270398.084
Easting :	571224.642
Manager :	Mike Washburn

Site Description :

The original building of the former St. Mary's hospital was opened in 1905. Over the years the property was expanded to house more buildings and eventually include parcels on the south side of Missouri Boulevard. The hospital originally had a 7,500-gallon diesel fuel tank that was removed in 1993, for which it received a letter of "No Further Action" from the Department's Underground Storage Tanks Section. That tank was replaced with a 6,000-gallon diesel tank. Other concerns included former gas stations on the adjacent parcels, and asbestos and lead-based paint in the old building.

Site Description :	This portion of the St. Mary's site consists of two tracts, A and B, located on the south side of Missouri Boulevard, at the eastern end of the site. Tract A has been redeveloped as a Starbucks coffee house. Tract B, immediately to the west of the Starbucks, is currently undeveloped. Neither of these two tracts had any recognized environmental conditions during the Phase I investigation.

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Site Description :	This portion of the St. Mary's site consists of two tracts, A and B, located on the south side of Missouri Boulevard, at the eastern end of the site. Tract A has been redeveloped as a Starbucks coffee house. Tract B, immediately to the west of the Starbucks, is currently undeveloped. Neither of these two tracts had any recognized environmental conditions during the Phase I investigation.

Manager :	Hugh Murrell

Site Description :

This property is located at 2601 East McCarty Street in Jefferson City. The subject property historically was occupied for warehouse storage by Mid-State Printing in the mid-1950s and later by Von Hoffman Printing. ISIS Chemical (Coatings), Inc. occupied the building from the late 1960s to 1989 and produced industrial coatings. During that time, the facility had 16 aboveground storage tanks (ASTs) located northeast of the property and behind the building. The tanks contained a variety of chemicals. Other unrelated findings from the Phase I Environmental Site Assessment (ESA) include a septic tank and a cistern. The Phase II ESA consisted of advancing nine shallow borings to bedrock (refusal encountered between 3.5 and 7 feet below ground surface). Soil samples were continuously sampled and field screened for sample selection for laboratory analysis. Three of the nine soil borings indicated the presence of hydrocarbon vapors from the field screening with a photoionization detector (PID). One soil sample from each boring was submitted for laboratory analysis based on PID field measurements. Groundwater was not encountered within any of the borings.

Source Description

Source Description : The MO-DNR includes a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework.
NCDB supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Q3 Flood Data

HYDROLOGIC UNIT
Hydrologic Unit Maps
USGS
The United States Geological Survey created a hierarchical system of hydrologic units originally called regions, sub-regions, accounting units, and cataloging units. Each unit was assigned a unique Hydrologic Unit Code (HUC). As first implemented the system had 21 regions, 221 subregions, 378 accounting units, and 2,264 cataloging units. Over time the system was changed and expanded. As of 2010 there are six levels in the hierarchy, represented by hydrologic unit codes from 2 to 12 digits long, called regions, subregions, basins, subbasins, watersheds, and subwatersheds. The table below describes the system's hydrologic unit levels and their characteristics, along with example names and codes.

WETLANDS NWI
National Wetland Inventory
U.S. Fish and Wildlife Service
(703) 358-2171
Wetland Inventory for the United States

EPA list of Radon zones

AIRPORT FACILITIES
Airport landing facilities
Federal Aviation Administration
(866) 835-5322
Airport landing facilities

BASINS
Better Assessment Science Integrating point & Non-point Sources
U.S. Environmental Protection Agency
855-246-3642
Integrated geographical information system national watershed data and environmental assessment known as Better Assessment Science Integrating point & Non-point Sources

DIGITAL OBSTACLE
Obstacles of interest to aviation users
Federal Aviation Administration
855-379-6518
The Digital Obstacle File describes all known obstacles of interest to aviation users in the U.S. with limited coverage of the Pacific the Caribbean Canada and Mexico. The obstacles are assigned unique numerical identifiers; accuracy codes and listed in order of ascending latitude within each state or area by FAA Region.

EPICENTERS
National Geographical Data Center
National Geographical Data Center
303-497-6826
List of recent and historic earthquakes and information.

FLOOD DFIRM
National Flood Hazard Layer Database
Federal Emergency Management Agency
The National Flood Hazard Layer Database (NFHL) is a computer database that contains the flood hazard map information from FEMAs Flood Map Modernization program. These map data are from Digital Flood Insurance Rate Map (DFIRM) databases and Letters of Map Revision.

EXECUTIVE SUMMARY

An initial hazardous, toxic, and radioactive waste (HTRW) assessment was performed for this project, in accordance with USACE ER 1165-2-132. The purpose of the assessment was to determine the potential for encountering contamination during project construction. The assessment consisted of reviewing existing regulatory documentation from EPA and Missouri Department of Natural Resources, and historical aerial photographs. Additionally, interviews with local officials and site reconnaissance provided information regarding current and former land use activities. Based on this assessment, there are no known HTRW sites within the project boundaries.

Information collected during the assessment indicates that there are no active CERCLA sites within a 2-mile distance from the project area. Under the RCRA database, three hazardous waste generators were identified within the project study area. ABB Power T&D Company is listed as a large quantity generator while Lauf Equipment Company and the Army Aviation Support facility are listed as small quantity generators. Even though these hazardous waste generators represent potential sources of contamination, the RCRA listings do not imply non-compliance. A review of the public record and field reconnaissance did not yield any documentation of contamination associated with these facilities.

Information obtained from MDNR indicates that there are no sites listed on the State Hazardous Waste Registry within a 2-mile distance from the project area and no active landfills within the project study area. Information from the Underground Storage Tank (UST) Program indicated that several leaking underground storage tanks (LUST) existed within the project study before late 1995. To date, all the LUST sites identified in the assessment have been formally closed out following MDNR procedures and testing conducted by MDNR has shown that any remaining petroleum contamination is below regulatory action levels.

ACRONYMS

AST	Above-ground Storage Tank
CERCLA	Comprehensive Environmental Response, Compensation, and Liability Act
CERCLIS	CERCLA Information System
CLST	Former Leaking UST Closed Out through MDNR
COCs	Contaminants of Concern
EPA	U. S. Environmental Protection Agency
EP-P	USACE's Kansas City District Planning and Hydrologic Engineering Branch
ER	USACE Regulation
GRR	General Reevaluation Report
HTRW	Hazardous, Toxic, and Radioactive Waste
IDW	Investigation Derived Waste
LUST	Leaking Underground Storage Tank
MDNR	Missouri Department of Natural Resources
MFA	Missouri Farm Association
MHTD	Missouri Highway and Transportation Department
MRLS	Missouri River Levee System
NFRAP	No Further Remedial Action Planned
NPL	National Priority List
PAHs	Polynuclear Aromatic Hydrocarbons
PCBs	Polychlorinated Biphenyls
QA/QC	Quality Assurance / Quality Control

RCRA	Resource Conservation and Recovery Act
RODs	Records of Decision
SVOCs	Semi-Volatile Organic Compounds
TSD	Treatment, Storage and Disposal facilities

APPENDIX E

HAZARDOUS TOXIC AND RADIOACTIVE WASTE ASSESSMENT

1.0 INTRODUCTION

A flood damage reduction study for Unit L-142 of the Missouri River Levee System (MRLS) is being conducted by the U.S. Army Corps of Engineers (USACE). A General Reevaluation Report (GRR) is being prepared by USACE for Unit L-142, which is on the river's left bank flood plain at Jefferson City, Missouri. Levee alignments under consideration are illustrated on Figures 1A through 1D. The project area includes the Jefferson City Memorial Airport, a large transformer manufacturer (ABB Power T&D Company, Inc.), a Jefferson City wastewater treatment plant, a National Guard facility, and a number of other commercial / light industrial operations. As part of the GRR, an initial hazardous, toxic, and radioactive waste (HTRW) assessment has been performed.

1.1 Purpose and Scope of HTRW Assessment

USACE Regulation No. (ER) 1165-2-132 provides guidance on how HTRW issues are to be factored into project planning and implementation. The objective of the guidance is to facilitate early identification and consideration of HTRW issues associated with the project. A reconnaissance level HTRW assessment of the project area was therefore initiated.

Policy outlined in ER 1165-2-132 states that construction of Civil Works projects in HTRW contaminated areas should be avoided where practicable. For cost-shared projects, the local sponsor is responsible for ensuring that, where necessary, any required HTRW actions are accomplished at 100 percent non-project costs. Therefore, the primary purpose of the HTRW assessment is to determine the potential for encountering contamination during project construction. The areas of key interest are project features where excavation could encounter contaminated soils, which in the case of L-142 is along levee alignments and in borrow areas. The potential for contaminated ground-water and surface-water in the project area is not within the scope of this HTRW assessment.

The initial HTRW assessment relied on existing documentation associated with the site, on observations made during a site visit, and on interviews with local officials. Current and past land use practices were evaluated to determine potential sources of HTRW contamination at the site.

The following sources of information were used to perform the HTRW assessment for the L-142 project:

- A survey of available U. S. Environmental Protection Agency (EPA), State of Missouri, and local agency documentation associated with the project area was performed and is discussed in section 2.0 of this report.

- A review of current and historical aerial photographs of the site was performed. The results of this review are presented in section 3.1 and Appendix A of this report.
- A site visit was made and a visual survey performed to look for indications of potential HTRW contamination within the project area. A discussion of the visual survey is presented in section 3.2 of this report.

Additionally, officials of Jefferson City, the State of Missouri, and area businesses were interviewed to supplement the information sources listed above.

1.2 Project Area

Levee alignments which are being evaluated as part of the GRR for Unit L-142 are shown on Figures 1A through 1D. For the purposes of an initial HTRW assessment, the project area has been defined based on the outermost reaches of any currently proposed levee alignments. This assumption has been made so that all possible alignments within the defined project area will be included in the assessment. Potential borrow areas outside of the defined project area are identified on Figure 1A.

The project area, located on the left bank of the Missouri River, is in Callaway County. The primary business and residential areas of Jefferson City are located on the right bank of the river in Cole County. Federal and state HTRW information sources were searched by county, city, and zip code, depending on the search methods available for reports and data bases. The size of the database was also considered when determining search criteria. In the event that sites were listed for the given search parameters, the locations were plotted to determine if they were within close proximity to the project area.

2.0 FEDERAL AND STATE INFORMATION SOURCES

Federal information sources used for the HTRW assessment were accessed by contacting EPA, Region VII. The two EPA programs used for the HTRW assessment were the Superfund program (Comprehensive Environmental Response, Compensation, and Liability Act - CERCLA) and the RCRA program (Resource Conservation and Recovery Act).

2.1 EPA Superfund Program (CERCLA)

The Superfund program addresses abandoned or uncontrolled HTRW sites. Two narrowly focused sources of Superfund site information available from EPA include the National Priority List (NPL) and approved Records of Decision (RODs). The 1995 NPL is a listing of the 1,245 sites identified by EPA as the most serious sites in the nation. While there are currently 22 NPL sites within the state of Missouri, none of these NPL sites are within Callaway or Cole counties. The ROD database indicates remedial actions in progress for specific Superfund sites. There are no RODs listed for Callaway or Cole counties.

A comprehensive list of Superfund sites is available through the use of the CERCLIS (CERCLA Information System) database. The CERCLIS database is a listing of all known or suspected, uncontrolled or abandoned hazardous waste sites. The CERCLIS database was searched for listed sites within the Missouri counties of Callaway and Cole. CERCLA active sites for these counties are summarized in Table 1. There are no active CERCLA sites within a 2 mile distance of the L-142 project area.

Table 1: CERCLA Sites in Cole and Callaway Counties, Missouri

LISTED SITE	LOCATION	DISTANCE FROM L-142 PROJECT AREA	REFERENCE # FOR PLOT
Timberline Stables	New Bloomfield, Callaway County	Greater than 5 miles from project area.	Not plotted.
Chesebrough Ponds	Jefferson City, Cole County	Approx. 3 miles west of project area.	Not plotted.

In addition to active Superfund Sites, an archive list is available on the CERCLIS database. The archive list, also known as the "No Further Remedial Action Planned (NFRAP)" report, consists of sites which have been removed from CERCLIS. NFRAP sites are not planned for further action under the federal Superfund program. This list represents sites which do not require a Superfund action based on preliminary assessments, or sites for which contamination was removed without the need for listing on the NPL. NFRAP sites for Cole and Callaway Counties are summarized in Table 2. NFRAP sites which are within 2 miles of the L-142 project area are plotted on Figure 2.

Table 2: NFRAP Sites in Cole and Callaway Counties, Missouri			
LISTED SITE	LOCATION	DISTANCE FROM L-142 PROJECT AREA	REFERENCE # FOR PLOT
April Hill Farm	New Bloomfield, Callaway County	Greater than 5 miles from project area.	Not plotted.
Callaway Nuclear Power Plant	Reform, Callaway County	Greater than 5 miles from project area.	Not plotted.
Central Electric Co.	Fulton, Callaway County	Greater than 5 miles from project area.	Not plotted.
Union Electric Co. - Callaway Plant	Fulton, Callaway County	Greater than 5 miles from project area.	Not plotted.
Amoco Petroleum Terminal	Jefferson City, Cole County	Greater than 5 miles from project area.	Not plotted.
Armontrout Park	Jefferson City, Cole County	Approx. 1 mile south-east of project area.	NFRAP 1
Benchmark Tool Co. Plant	Jefferson City, Cole County	Approx. 1.5 miles south-west of project area.	NFRAP 2
Benchmark Tool Co. Plant B	Jefferson City, Cole County	Approx. 3 miles west of project area.	Not plotted.
Dowd Site (RR Spill)	Jefferson City, Cole County	Approx. 4.5 miles west of project area.	Not plotted.
Fabick Caterpillar	Jefferson City, Cole County	Approx. 1.5 miles south-west of project area.	NFRAP 3
Jefferson City (FMGP)	Jefferson City, Cole County	Approx. 0.5 miles south of project area.	NFRAP 4
Jefferson City Arsenal	Jefferson City, Cole County	Approx. 1.5 miles south-west of project area.	NFRAP 5
Jefferson City Landfill	Jefferson City, Cole County	Approx. 1.5 miles east of project area.	NFRAP 6
Orscheln Brothers Trucking	Jefferson City, Cole County	Approx. 1 mile south-west of project area.	NFRAP 7
Phillips Pipeline Co.	Jefferson City, Cole County	Approx. 3.5 miles south-west of project area.	Not plotted.
Sun Chemical Corp. - Printing Ink. Division	Jefferson City, Cole County	Approx. 2 miles west of project area.	NFRAP 8

2.1.1 SUMMARY OF SUPERFUND FINDINGS - There are no active CERCLA sites within a 2 mile distance from the project area. A total of eight NFRAP sites are located within a 2 mile distance of the project area. Of these eight NFRAP sites, seven are across the river (right bank) from the project area and therefore have a low potential as a source of HTRW contamination to the L-142 project. The only NFRAP site within 2 miles of the project area which is on the project side (left bank) of the

river is the Jefferson City Landfill, which is located approximately 1.5 miles downstream of the L-142 project. The Jefferson City Landfill has a low potential as a source of HTRW contamination to the project area due to the downstream location and distance.

2.2 EPA RCRA Program

Whereas CERCLA provides the mechanism for identifying and remedying deficiencies associated with past hazardous waste handling; RCRA provides regulation of current hazardous waste generators, transporters and treatment, storage and disposal (TSD) facilities. RCRA identifies what a hazardous waste is and establishes standards for waste management. Routine reporting is required for RCRA hazardous waste generators, transporters, and TSD facilities. A RCRA based list of organizations which handle hazardous waste does not imply non-compliance with regulations nor does it imply uncontrolled releases.

EPA performs RCRA searches by facility, by county, or by zip code. A RCRA list by county would include hundreds of facilities, and as such would be unmanageable. Therefore, a search by zip codes was requested. The post office zip code directory lists 4 zip codes for Jefferson City (65101, 65102, 65109, and 65110). The directory also lists a zip code for Cedar City, but based on a telephone conversation with the Jefferson City post office, the Cedar City zip code is no longer in use.

The RCRA searches by zip code resulted in 53 hazardous waste facilities for 65101, 16 facilities for 65102, 24 facilities for 65109, and no listed facilities for 65110. Due to the large number of facilities listed for Jefferson City (93 facilities total), only the facilities on the project side (left bank) of the river were plotted on Figure 2. Plotted sites are listed in Table 3 . The complete listing of Jefferson City RCRA facilities is available in the HTRW project files (Geoenvironmental Section).

Table 3: RCRA Sites on Project Side of River (Left Bank)

LISTED SITE	LOCATION	DISTANCE FROM L-142 PROJECT AREA	REFERENCE # FOR PLOT
ABB Power T & D Co., Inc.	500 Westinghouse Dr, Jefferson City	Within project area.	RCRA 1
Lauf Equipment Co., Inc.	500 Wehneyer Dr, Jefferson City	Within project area.	RCRA 2
Army Aviation Support Facility	Memorial Airport, Hwy 94 Jefferson City	Within project area	RCRA 3

2.2.1 SUMMARY OF RCRA FINDINGS - ABB Power T&D Company is listed as a Large Quantity RCRA hazardous waste generator located within the project area. Additionally, Lauf Equipment Company and the Army Aviation Support Facility are RCRA listed small quantity generators located within the project area. Even though these three hazardous waste generators represent potential sources of contamination,

the RCRA listings do not imply non-compliance. A review of the public record did not yield any documentation of contamination associated with these facilities.

2.3 Missouri Department of Natural Resources

The Missouri Department of Natural Resources (MDNR) is the state agency responsible for maintaining HTRW information. A number of MDNR programs were used to obtain information pertinent to the initial HTRW assessment.

2.3.1 - HAZARDOUS WASTE PROGRAM - The "Missouri Registry of Abandoned or Uncontrolled Hazardous Waste Disposal Sites" tracks facilities or sites that are deemed hazardous by MDNR. Based on a telephone conversation with Mr. Joe Gassner of MDNR's Hazardous Waste Program, there are no sites listed on the hazardous waste registry in either Cole or Callaway counties.

Correspondence from the Environmental Geology section of MDNR, dated July 6, 1994, listed hazardous waste sites that were known to exist in the general area of the Jefferson City Airport. The subject correspondence, which is available in the HTRW project files (Geoenvironmental Section), listed seven hazardous waste sites in Cole or Callaway Counties. Additionally, the correspondence listed a landfill location which had been proposed by ESM, Inc. in 1976. Table 4 summarizes the sites listed by the 1994 correspondence. Five of the listed sites are located within a distance of 2 miles from the project area and are plotted on Figure 2.

Table 4: HTRW Sites in Cole and Callaway Counties, Missouri MDNR Environmental Geology Section, 7/11/94			
LISTED SITE	LOCATION	DISTANCE FROM L-142 PROJECT AREA	REFERENCE # FOR PLOT
Kies (Mies)	Callaway County, Section 6 of T46N, R07W	Greater than 5 miles from project area.	Not plotted.
Timberline Stables (also on NFRAP list)	Callaway County, Section 36 of T46N, R11W	Greater than 5 miles from project area.	Not plotted.
Maytag	Cole County, Section 2 of T44N, R12W	Approx. 2 miles south-west of project area.	MDNR 1
Phillips Pipeline (also on NFRAP)	Cole County, Section 23 of T44N, R12W	Approx. 3.5 miles south-west of project area.	Not plotted
State Surplus	Cole County, Section 8 of T44N, R11W	Approx. 1 mile south of project area.	MDNR 2
Missouri National Guard	Cole County, Section 12 of T44N, R12W	Approx. 1.5 miles south-west of project area.	MDNR 3
Armentrout Park (also on NFRAP)	Cole County, Section 9 of T44N, R11W	Approx. 1 mile south-east of project area.	NFRAP 1
ESM, Inc. proposed Landfill (1976)	Cole County, NE 1/4, NE 1/4, Sec. 14, T44N, R11W	Approx. 0.25 miles north-west of project area.	MDNR 4

2.3.2 - SOLID WASTE MANAGEMENT PROGRAM - The MDNR Solid Waste Management Program maintains a list titled "Missouri Solid Waste Disposal Areas & Processing Facilities." This document, which is commonly referred to as the "landfill report," is a tabulation of active solid waste landfills, transfer stations, and processing facilities within the state. The 11/22/95 listing includes one sanitary landfill in Callaway county and one sanitary landfill in Cole county. The landfill in Callaway county is located in Fulton, Missouri which is approximately 20 miles north of the Unit L-142 project site. The landfill in Cole county is in the Jefferson City area, however it is over 3 miles southwest of the project area. A solid waste transfer station listed in Cole county is over 2 miles south of the L-142 project area.

A listing of RCRA treatment, storage, and disposal (TSD) facilities, dated 11/16/95, was obtained from the Permit Section of the MDNR. There were no TSD facilities listed in Callaway county and only one facility listed in Cole county. The Cole county facility is Chesebrough Ponds, Inc., which is also listed as a CERCLA site and has been previously discussed. The site is located on the right bank of the river approximately 3 miles west of the study area.

2.3.3 - UNDERGROUND STORAGE TANK (UST) PROGRAMS - The Missouri Underground Storage Tank Report is a comprehensive listing of all registered USTs located within the state of Missouri. The Underground Tank Section of MDNR was contacted and the UST report requested. MDNR stated that the report was not available due to apparent inaccuracies in past publications. Therefore, the information which makes up the report is currently being reviewed and MDNR would not release past versions of the report.

The MDNR Environmental Services Program maintains the Leaking Underground Storage Tank (LUST) Report. The report provides a listing of all leaking USTs reported to MDNR. The report contains only sites for which further action is required before closure is granted by the state of Missouri. Previously closed USTs are not listed on the LUST report.

The LUST report dated November 11, 1995, was reviewed to determine sites which might impact the L-142 project. The twenty Jefferson City LUST sites listed by the report are summarized in Table 5. The sites which are within a 2-mile distance of the L-142 project area are plotted on Figure 2.

Table 5: LUST sites listed in Jefferson City			
LISTED SITE	LOCATION	DISTANCE FROM L-142 PROJECT AREA	REFERENCE # FOR PLOT
Amoco #8586	1907 Christy Road, Jefferson City	Approximately 3 miles south-west of project area.	Not plotted.
Fill-N-Wash	Clark & Elm St, Jefferson City	Approximately 1.5 miles south of project area.	LUST 1
Sears #2331	3600 Country Club Dr, Jefferson City	Approximately 4.5 miles west of project area.	Not plotted.
Hocker Oil	E. McCarty, Jefferson City	Approximately 1 mile south of project area.	LUST 2
Al's Auto Service	1015 E. McCarty, Jefferson City	Approximately 1.25 miles south of project area.	LUST 3
Central Maintenance Garage	820 E. Miller, Jefferson City	Approximately 1.25 miles south of project area.	LUST 4
Missouri Highway & Trans. Dept.	200 Harrison St, Jefferson City	Approximately 0.75 miles south-west of project area.	LUST 5
UPS	714 Heisinger Rd, Jefferson City	Approximately 1.75 miles south-west of project area.	LUST 6
Missouri Highway & Trans. Dept.	Hwy 54, East Bridge, Jefferson City	Approximately 0.5 miles south-west of project area.	LUST 7
Jefferson City Arsenal Site	1717 Industrial Dr, Jefferson City	Approximately 1.5 miles south-west of project area.	LUST 8
US Rents It	1513 Industrial Dr, Jefferson City	Approximately 1.25 miles south-west of project area.	LUST 9
Missouri Highway & Trans. Dept.	1511 Missouri Blvd, Jefferson City	Approximately 1.75 miles south-west of project area.	LUST 10
Former Walmart #29	2233 Missouri Blvd, Jefferson City	Approximately 2.25 miles west of project. area.	Not plotted.
John Fabrick Tractor Co.	2009 Missouri Blvd, Jefferson City	Approximately 2 miles south-west of project area.	LUST 11
Capitol City Car Classics	2709 Missouri Blvd, Jefferson City	Approximately 2.5 miles west of project area.	Not plotted.
Break Time #M10	Old Hwy 63 North, Jefferson City	Less than 0.25 miles west of project area.	LUST 12
Kaw Transport Company	Renz Farm Rd, Jefferson City	Approximately 1 mile west of project area.	LUST 13
McKay Motors	905 Stadium Blvd, Jefferson City	Approximately 2.5 miles south-west of project area.	Not plotted.
Union Pacific Railroad	State St., Jefferson City	Approximately 0.75 miles south of project area.	LUST 14
Wal-Mart	718 W. Stadium Dr, Jefferson City	Approximately 2.25 miles south-west of project area.	Not plotted.

A preliminary site investigation report of Cedar City USTs was prepared by the Environmental Services Program of MDNR in April, 1995. According to the report, an extensive hydrocarbon plume of relatively low concentration had been detected in the area by the Missouri Highway and Transportation Department (MHTD). After the 1993 Flood, MDNR conducted field screening activities in an effort to determine whether significant hydrocarbon contamination was present at the site. Field screening included soil gas surveys and analysis of soil samples by field detection methods. The results of the survey indicated that most of the surface and shallow subsurface petroleum contamination has degraded to below regulatory action levels, probably due in large part to the 1993 flood as well as other natural attenuation activities. The Breaktime M-10 site, which is currently on the active LUST list, and one other former gas station (Phillips 66), were excluded from this study. A copy of the draft report for the MDNR investigation is available in the HTRW project files (Geoenvironmental Section).

The 1995 Cedar City preliminary site assessment report listed three active LUST sites in the vicinity of the L-142 project area. Of the three sites listed, two of the sites (Break Time #M10 - LUST12, MHTD LUST 7 in Table 5) remain on the active LUST list. The other site has been closed out in accordance with MDNR requirements. Additionally, the preliminary investigation report listed three LUST sites in or near the project area which had been previously closed out through MDNR. The closed out LUST sites in the vicinity of the project area are presented in Table 6.

Table 6: Closed Out LUST Sites In or Near Project Area

LISTED SITE	LOCATION	DISTANCE FROM L-142 PROJECT AREA	REFERENCE # FOR PLOT
MFA Oil	East of Highway 54	Within project area.	CLST 1
Westinghouse/ABF	ABB Site	Within project area..	CLST 2
ABB Power T&D Co.	ABB Site	Within project area.	CLST 3
Jefferson City Flying Service	Jefferson City Airport	Within project area.	CLST 4

2.3.4 SUMMARY OF FINDINGS FROM MDNR SOURCES - The MDNR registry of abandoned or uncontrolled hazardous waste sites did not include any sites in Cole or Callaway counties. A second source of information from the state was correspondence by the Environmental Geology section of MDNR. The subject correspondence listed only one site which might impact the L-142 project. The site proposed in 1976 for use as a landfill is in close proximity to the project area. However, it is not known whether the proposed site was ever used as a landfill, as it is not listed on any federal database nor is it on Missouri's landfill report. No facilities are listed by the MDNR Solid Waste Management Program (landfills or TSDs) which would have potential to impact the project.

The MDNR LUST report included the Break Time #M10 site which is in close proximity to a project alternative . This site is currently being remediated. Additionally, four sites within the project area were formerly on the LUST list and were formally closed out with MDNR. In spite of the tank closures which have been performed or are in progress, the potential exists for encountering hydrocarbon contaminated soil during excavation in the western portions of the project area.

Hydrocarbon contaminated soil is not, in itself, a hazardous waste. If encountered during excavation, hydrocarbon contaminated soil could be handled as a special waste and if necessary, disposed offsite at an estimated cost of $50/ton. Hydrocarbon contaminated soil would only be considered hazardous if specific hazardous components were present. If this were to be the case, costs would be significantly impacted. However, there is no evidence of hazardous constituents associated with the area UST's.

3.0 REVIEW OF LAND USE PRACTICES

3.1 Historical Aerial Photographs

Historical aerial photographs of the L-142 project area were reviewed to identify potential sources of HTRW contamination. The photographic record covers the period from 1958 to 1995. Aerial photographs were reviewed and study areas were identified based on past land use practices. A telephone interview with Mr. Marty Brose, Director of Public Works, Jefferson City, was used in conjunction with the aerial photo review as an aid in defining past land use activities.

A total of 34 study areas were defined and activity tracked over the available historic photo record. The study areas are shown on Figure 3. Summary tables are presented in Appendix A for each aerial photograph date. The tables present the study area numbers, an area descriptor based on activity at some point in the historic record, and a brief description of the visible activity at the date of the aerial photograph.

Some operations, by their nature, are known to have the potential to act as sources of HTRW contamination. Examples of this type of operation within the L-142 study area are an industrial manufacturer (ABB), an agri-business which includes the storage and sale of various chemicals, several former gas stations with USTs, and airport operations which includes fueling and maintenance operations. The potential for contamination by other operations, such as warehouses in which the type of materials being stored is unknown, are less obvious. Section 3.1.1 presents a summary of sites within the project area which, based on apparent land use, have potential to act as a source of HTRW contamination.

3.1.1 REVIEW OF LAND USE FROM AERIAL PHOTOS - The study areas shown on Figure 3 and discussed in this section of the report are judged to have potential to act as a source of HTRW contamination based on current or past land use. The areas are highlighted so that construction activities associated with the project (levee alignments, borrow area locations) can be planned in a manner to minimize the potential for encountering HTRW contamination. Additionally, future site investigations would focus on the listed study areas.

Study Area 2 (TCI Cable Storage) - Aerial photo in 1965 showed a large truck or above-ground storage tank (AST) present. Aerial photos 1975 through 1995 showed four large warehouses and at various times materials were stored in the yard.

Study Areas 4, 6, 7, 8, 9, 10, 11 (Gas Stations) - Areas have been used for retail gasoline sales at various times throughout the historic record. AST's have been noted at various locations and UST's are assumed to have been present based on land use.

Study Area 5 (Mobile Home Sales) - Aerial photos 1958 and 1965 show this area as having been a termination point for the railroad. AST's are apparently present in the photos dated 1975 through 1995.

Study Area 12 (MFA - West) - The 1995 aerial photo shows large storage tanks in the yard. Earlier photos, beginning in 1984, show a fairly cluttered lot.

Study Area 13 (South of Dirt Road) - The 1965 aerial photo shows storage of what may be a large number of cars.

Study Area 15 (Hood Lumber) - The entire aerial photo history shows warehouses and material stored in the yard.

Study Area 16 (MFA - East) - The 1975 aerial photo shows the lot apparently being used as a junk yard / salvage facility.

Study Area 17 (Dam Steel) - The 1975 aerial photo shows the lot apparently being used as a junk yard / salvage facility.

Study Area 18 (Beaufort Trucking) - The 1975 and 1984 aerial photos show four AST's.

Study Area 19 (Capitol Concrete) - The 1975 aerial photo shows two AST's.

Study Area 20 (Wastewater treatment) - Wastewater treatment plant in operation beginning in aerial photo dated 1975.

Study Area 24 (Bisges Trucking) - Trucking operation noted on 1984 through 1995 aerial photos.

Study Area 25 (National Guard) - Beginning with the aerial photo dated 1984, aviation related activities were noting including the presence of helicopters.

Study Area 26 (Transfer Trucking Co.) - Trucking operations apparent beginning with the aerial photo dated 1993.

Study Area 27 (ABB) - Large industrial / manufacturing facility shown beginning with aerial photo dated 1975.

Study Area 28 (Lauf Equipment) - Operation with trucking activity apparent beginning with aerial photo dated 1984.

Study Area 34 (Jefferson City Airport) - Aviation activities throughout photo historic record.

3.2 Site Visit

A site visit was performed on January 17, 1995. Representatives from USACE were Mr. Douglas Overmohle, Mr. Matt Dolly, and Mr. Michael Rohlfs, from the Kansas City District's Environmental Branch. Prior to the site visit, USACE representatives met with individuals from the Department of Public Works, Jefferson City. Meeting attendees included Mr. Martin A. Brose (Director of Public Works) and Mr. John L. Smith (Engineer Design Supervisor). Historic and current activities within the project area were discussed. The meeting provided information as to past and present land use, as well as a discussion of the post 1993 flood buyout efforts underway in Cedar City.

In general, the site visit of the project area did not raise any major concerns regarding the potential for HTRW contamination at the site, beyond the normal concerns associated with commercial / light industrial usage. No highly suspect areas were noted during the site visit.

3.2.1 Site Visit Observations - Areas West of Highway 54

Study Area 4 (Gas Station) - A small gas station was observed at Study Area 4. It was not determined whether fuel tanks were in place underground. No tanks were observed aboveground. Cars inside the service bay(s) indicated that the building was still in use.

Study Area 7 (Gas Station) - An underground tank removal was in progress at the time of the site visit. The tank had been excavated and was resting on the ground surface.

Study Area 8 (Gas Station) - The area was occupied by an apparently abandoned gas station. Two ASTs, surrounded by a containment wall (approximately 3 feet in height), were observed on the western side of the property.

Study Area 9 (Gas Station) - Evidence of a recent tank excavation was noted in this area. The ground was disturbed and had been recently graded.

Study Area 10 (Gas Station) - This area consisted of two former gas station facilities. Two building foundations are clearly present. Remnants of the fuel pump islands and aboveground fuel tank leakage containment walls, located between the building foundations, were observed. It appears the two facilities may both have been served by the above ground tanks.

Study Area 12 (MFA West of Hwy. 54) - The MFA facility was enclosed with a chain link fence. Bulk storage containers were noted as well as truck trailers for product distribution.

3.2.2 SITE VISIT OBSERVATIONS - AREAS EAST OF HIGHWAY 54

Study Area 13 (Area South of Dirt Road) - Historical photos of this area indicated some type of debris south of the dirt road running beneath Highway 54 bridge. Scattered, flood related debris was observed on the upstream side of trees. Construction debris including concrete rubble and associated rebar was also observed.

Study Area 18 (Beaufort Trucking) - The northern border of Study Area 18 contained construction debris including concrete rubble and associated rebar.

Study Area 24 (Bisges Trucking) - An aboveground fuel tank was observed adjacent the east side of the Bisges Trucking building.

Study Area 26 (Transfer Trucking) - Based on an interview with John Allen of ABB, this trucking transfer operation is primarily associated with ABB. A large underground fuel tank was stored in the rear of the lot south of the building.

Study Area 27 (ABB) - Mr. John W. Allen (ABB - Environmental Control Officer, 314-659-6223) guided a tour of the ABB facility. The plant and yard were well maintained and organized. Bulk chemical storage tanks are located north of the ABB building.

Study Area 28 (Lauf Equipment) - Lauf Equipment serves as a distributor of farm implements.

Study Area 30 (Ure Gas) - Several portable propane tanks were observed.

3.3 Interviews

In addition to meeting with officials of the City of Jefferson and ABB during the USACE site visit, a number of telephone interviews were conducted. The following section documents those discussions, which have been organized by study area.

Study Areas 6 through 11(Gas Stations) - This area along Cedar City Drive is lined with former retail gasoline stations and was referred to as "Gasoline Alley" by Jefferson City officials who were interviewed. This area was discussed with Mr. Ron Sheeley (MDNR; 573-526-6023) during a telephone conversation on January 29, 1996. Mr. Sheeley informed Mr. Michael Rohlfs that after the flood of 1993, MDNR had conducted a preliminary site investigation of a low concentration hydrocarbon plume which had been reported by the Missouri Highway and Transportation Department (MHTD). The preliminary site investigation report has been previously discussed in section 2.3.3 of this report.

Study Area 11 (Gas Station) - On January 22, 1996, Mr. Jim Smith (MHDT; 573-751-7688) was contacted by Mr. Rohlfs. Mr. Smith stated that a sanitary sewer line runs beneath the Highway 54 abutment. The line runs from Cedar City to the Jefferson City Waste Water Treatment Plant. An access point / lift station for the sewer line is located in the southern portion of Study Area 11. This was confirmed by Mr. Marty Brose on the same day. Additionally, during construction of the Highway 54 intersection, a underground fuel tank was removed from the vicinity. No other HTRW concerns are known to exist in the area according to Mr. Smith.

Study Areas West of Highway 54 (Former Cedar City) - Mr. Rohlfs contacted Ms. Melva Fast (City of Jefferson City; 314-634-6358) on January 18, 1996 regarding the area west of Highway 54. Ms. Fast discussed the Jefferson City buyout of flood impacted properties, which was ongoing. As the City did not want to inherit an HTRW problem, the properties were purchased by Jefferson City only after an internal environmental review had been performed. Along "Gasoline Alley", an out of state owner was removing the last of the underground fuel tanks. When the current removal is complete, no other tanks are known to be of concern.

Study Area 12 (MFA - West of Hwy. 54) - The MFA (Missouri Farm Association) is a full service agriculture dealer. The operation includes the storage and distribution of chemicals, feed and seed. Bulk storage of chemicals occurs in aboveground tanks on site. Petroleum products are not handled by this business. This information was obtained through a phone conversation with the MFA site manager, Mr. Bob Stuenkel (573-635-7183) and Mr. Rohlfs on January 22, 1996.

Study Area 16 (MFA - East of Hwy. 54) - The MFA East Site (MFA Oil - 573-635-7722) was contacted on January 25, 1996. An employee told Mr. Rohlfs that oil is stored in cases on the property. No bulk storage of petroleum products occurs at the site. However, based on discussions with officials of Jefferson City, MFA Oil was formerly a fuel operation.

Study Area 20 (Wastewater Treatment Plant) - Mr. Tom Wallace, Jefferson City Wastewater Utilities Division Director, was contacted by telephone. The treatment plant's state permit, which is in accordance with applicable federal laws, includes sludge disposal by land application. Mr. Wallace indicated that treatment plant sludge is disposed of primarily in riverbottom farmland in an area within a 4 to 5 mile distance of the plant. At times, sludge is applied to pasture land and a sod farm. The treatment plant's monitoring program includes analyses of metals, which are the primary analytes of concern associated with wastewater sludge. Metals which are monitored include arsenic, cadmium, copper, lead, mercury, molybdenum, nickel, selenium, and zinc. Mr. Wallace indicated that land application of wastewater sludge was based on metals limits for the "clean" sludge part of the state program, which is well below ceiling concentrations in the regulations.

Study Area 27 (ABB) - Mr. John Allen, ABB's Environmental Control Officer, was interviewed during the USACE tour of the ABB facility. Mr. Allen stated that the

transformer plant was constructed in 1972. The plant was constructed as a state of the art facility for manufacture of pad mounted transformers. ABB's transformer manufacture specifically excluded the use of PCB's in the product. Mr. Allen indicated that documentation was available which states that PCB's have never been used at the ABB facility. Currently, products returned to ABB for service are sampled and analyzed for PCB's. Transformers containing PCB's are not accepted.

Mr. Allen indicated that a mineral oil feeder line rupture in 1995 released approximately 4000 gallons of product. The spill was contained, never reaching the large lagoon along the south side of the building. Soil contaminated by the oil was excavated and disposed offsite.

The painting process used by ABB generates lead containing waste requiring disposal as a hazardous waste. The plant plans on switching to a lead-free painting process in the future.

Study Areas 25 and 34 (National Guard and Jefferson City Memorial Airport) - Based on conversations with Jefferson City officials during the USACE site visit, the airport and associated businesses appear to have closed out all known USTs. ASTs are currently in use for fueling operations. Typical aviation operations are ongoing within the subject study areas. Activities including fueling, maintenance, and de-icing at the airport and National Guard facilities. The National Guard operations include the use of fixed wing aircraft as well as helicopters.

3.4 Summary of Land Use Findings

Over the time frame covered by aerial photographs, land use within the project area has included numerous commercial and light industrial operations. Study areas with commercial and light industrial operations were identified along both sides of Highway 54: MFA-East, MFA-West, Gasoline Alley along Cedar City Drive, Hood lumber and Dam Steel. The northern portion of the project area includes the ABB transformer plant, two trucking firms, and a farm implement dealer. The central region of the project area includes the Jefferson City Memorial Airport and associated businesses, the National Guard, and the wastewater treatment plant. While current and past land use practices present a potential source of HTRW contamination in the project area, the public record did not indicate any areas of documented hazardous materials contamination.

The only documented contamination within the study area is associated with leaking USTs. State records, site visit observations, and interviews with Jefferson City officials indicate that all of the known leaking USTs have been or are being closed out in accordance with MDNR procedures.

4.0 RECOMMENDED FUTURE HTRW SITE INVESTIGATIONS

As stated in ER 1165-2-132, HTRW assessments during the feasibility phase should (1) identify the nature and extent of contamination at the site, if present, (2) consider the impact on project plans, and (3) evaluate impacts on project costs. Based on these requirements, HTRW site investigations may be warranted in the next study phase of the L-142 project. For planning purposes, a potential HTRW site investigation program has been outlined. If an HTRW site investigation is initiated, a specific program should be defined during development of a work plan initiated in the early stages of the next project phase.

In the event that contaminated soils are encountered during excavation associated with project construction, special material handling and disposal requirements would impact project costs. Therefore, an HTRW site investigation should focus on areas of construction impact, specifically on planned excavations where potential contamination sources are present. Soil sampling would be performed along planned levee alignments, as well as in any other areas of anticipated excavation. Samples would be collected from ground surface to below the base of the planned excavations.

When planning soil sampling locations, consideration should also be given to the nature of the project site. Since project construction will occur in a lowland, river bottom area, many of the contaminants of concern may have mobilized as a result of flooding. This would result in contamination occurring in a somewhat distributed manner, rather than existing only at point source locations. Therefore, sampling locations should be selected in an effort to achieve good areal coverage of the site while still focusing on areas with the highest potential as HTRW sources.

Identification of specific sampling locations and associated analyses is not within the scope of this report. The purpose of this section of the report is to provide a basis for: 1) determining whether to proceed with an HTRW site investigation, 2) developing a site investigation program during the next project study phase, if necessary, and 3) providing a cost estimate for future HTRW assessments.

4.1 Assumed L-142 Project Parameters

The levee alignments which are being evaluated represent up to 25,000 lineal feet of levee construction. Most of the levee would be constructed after existing ground is stripped to a depth of approximately 6 inches. Excavation would be required for construction of three stop log gaps and five drainage structures associated with the project. Excavation depths of 5 and 10 feet are likely for the stop log gaps and drainage structures, respectively.

Excavation for borrow would also be required for levee construction. The approximate borrow area locations currently being considered are illustrated on Figure 1A. Borrow area excavation has been assumed as 1 foot of stripping and 2 feet of excavation for a total depth of 3 feet. In addition to the borrow areas, existing sands which were deposited during the 1993 flood may be used as a source of construction material.

4.2 Potential Contaminants of Concern

Potential contaminants of concern (COCs) have been identified in an effort to outline an analytical program for an HTRW site investigation. Analyses for listed COCs are based on past land use, as well as on standard analytes associated with HTRW evaluations.

The following analytes are recommended for consideration in developing a site investigation program for the L-142 project.

Petroleum Hydrocarbons - Potential petroleum hydrocarbon contamination should be evaluated primarily in UST and AST locations, and secondarily in areas of trucking operations or other industrial activities. Analyses should be performed which provide identification over the hydrocarbon ranges associated with gasoline and diesel.

Metals - RCRA metals should be evaluated in areas of UST or AST usage or other areas associated with potential fuel spills.

Volatile Organic Compounds (VOCs) - VOC contamination should be evaluated in areas of potential fuel leakage from USTs / ASTs or other potential spill locations. VOCs should also be evaluated in areas where solvents may have been used in the past, such as ABB, Hood lumber, Dam Steel, and the Jefferson City Memorial Airport operations.

4.3 Scope of Potential Site Investigation

The following outline presents an approach to the L-142 site investigation which can be used for planning and budgeting purposes for the next phase of the HTRW evaluation.

Surface/Subsurface Soil Samples Along Levee Alignment - Soil borings should be considered in the vicinity of the leaking USTs. The soil borings should extend 2 to 5 feet beneath the planned excavation, depending on the degree of certainty associated with the planned excavation depths. Due to the depth of sampling required, drilling equipment such as an auger or cable tool rig would be required.

The following soil boring depths and sample intervals have been assumed:
5 borings @ 12 ft./boring - 4 sample intervals.

Costs associated with an HTRW site investigation for the project include work plan preparation, drilling activities for subsurface sampling, surface and near surface sampling, analysis of soil samples, evaluation of site data, and preparation of a final investigations report. In order to develop a cost estimate, an outline of an analytical program was developed as shown in Table 7. Total costs for the identified HTRW site investigation are estimated to be $26,250 presented in Table 8.

Table 7 - Site Investigation Analyses Assumed			
ANALYTE	ANALYTICAL METHOD	NUMBER OF ANALYSES	UNIT COST
Petroleum Hydrocarbons	Modified EPA 8015	20 analyses	$250/lab analysis
RCRA Metals	EPA Method 6010	5 analyses	$300/lab analysis
VOCs	EPA Method 8260A	5 analyses	$350/lab analysis
TOTAL ESTIMATED ANALYTICAL COST			$8,250

Table 8 – Estimated Costs for HTRW Site Investigation	
WORK ITEM	COST
1. Prepare Work Plan including Field Sampling Plan & Health and Safety Plan	$2,000
2. Field Investigation – Surface/Subsurface Sampling Drill Crew & Field Geologist - 1 days mobilization 2 days drilling 1 days de-mobilization 4 days @ $2,500/day = $10,000	$10,000
4. Analyticals - see Table 6.	$8,250
Review Data and Prepare Report	$4,500
TOTAL ESTIMATED HTRW SITE INVESTIGATION COST	$24,750

5.0 CONCLUSIONS

The purpose of the initial HTRW assessment was to determine the potential for encountering contamination during project construction. The assessment relied on existing documentation from EPA and MDNR, a review of historical aerial photographs, a visual survey during a site visit, and interviews with officials from Jefferson City, MDNR, and local businesses.

The assessment found no Superfund sites or documented releases of hazardous waste in close proximity to the L-142 project. Three RCRA listed hazardous waste generators are located in the project area. However, RCRA listings do not imply non-compliance and there is no documented contamination associated with these facilities.

A review of information sources available through MDNR indicated no uncontrolled hazardous wastes sites which would impact the L-142 project. Also, no sites of concern were indicated on the MDNR landfill and TSD facilities lists. The proposed landfill site, listed by MDNR in 1994 correspondence, was to be located at a site near the project. However, it is not known whether the proposed site was ever used as a landfill, as it was not listed on federal databases nor is it on Missouri's landfill report.

The State of Missouri's underground storage tank (UST) monitoring program indicated a number of leaking USTs in the project area. UST sites which might impact the L-142 project include the Break Time #M10 (Cedar City) site which is currently on the MDNR LUST list. The Break Time site is currently being remediated. Additionally, four sites within the project area were formerly on the LUST list and were closed out through MDNR. In spite of the UST closures which have been performed or are in progress, there is a potential for encountering hydrocarbon contaminated soil in the western portion of the project area. It should be noted however, that hydrocarbon contaminated soil is not, in itself, a hazardous waste. Petroleum hydrocarbon contamination, if encountered in limited quantities, could be planned for and handled with minimal impact to the project.

Historical aerial photographs, interviews with local authorities, and a site visit were used to provided information regarding current and former land use activities. Study areas of concern include ABB, various trucking firms, the Jefferson City Memorial Airport and associated businesses, the National Guard, Hood Lumber, Dam Steel, and the wastewater treatment plant. Past and current land use practices present an HTRW risk to the project, however, the public record did not indicate any documented areas of HTRW contamination.

Based on the initial assessment, HTRW contamination does not appear to present a risk to the L-142 project. However, since several leaking USTs have been documented within the construction limits of proposed alternatives, a site investigation may be warranted during the next project design phase. Assuming that the L-142 project moves forward from the GRR into plans and specifications, the HTRW site investigation should be considered early in the design process.

6.0 IDENTIFICATION OF THE NATIONAL ECONOMIC DEVELOPMENT PLAN

The Hazardous, Toxic, and Radioactive Waste (HTRW) Assessment was performed in a manner such that all possible contamination sources within the study area were considered as possible impacts to the project. Subsequent to the completion of this report, the NED plan for unit L142 was identified. The NED plan, as presented in the complete report, better defines the levee alignment, borrow areas, structure locations, and level of performance as compared to assumptions utilized during the HTRW analysis. The Leaking Underground Storage Tank sites identified in the assessment have been formally closed following MDNT procedures. Testing conducted by MDNR has shown the petroleum contamination to be below regulator action levels. Based on the assessment performed, further HTRW investigations are not considered necessary However, it is recommended that a brief design change review and a visual site verification be performed during detailed design activities to ensure that potential impacts and site conditions have not significantly changed since the original assessment was performed. If HTRW sites are discovered during design or construction, the non-Federal sponsor would be responsible for the cleanup..
